mastering business administration in education and african politics the sierra leone chapter this is a revised and improved edition of your book and as i have already been told it is quite up to date with far more relevant information that address education educational business and political issues in africa in particular and how these are disturbing educational developments especially in sub sahara and also with suggestions for improvements according to mohan kaul the co chairman of commonwealth business council giving the challenges ahead governments have realized that it is beyond their capacity and means to achieve the task of improving education for all however patrick dlamini chief executive of development bank of south africa sited what has gone wrong with sudden growth of private schooling outside state control the government is having problems of retaining seasoned teachers private schooling is poaching the best of brains from the public schooling system and the government is left with poor quality teaching and inexperienced teachers because now the private sector has taken the crème de la crème how do you balance that but business is business and business is about getting the customers what they want and satisfying them most if african governments are unable to provide what people prefer most people have the right to choose from existing alternatives so that they can spend their hard earnings on what they want and what can satisfy them most as long as they have the ability and willingness to pay for them that is the dictation of free market philosophy mohamed sannoh methodist boys high school kissy mess mess freetown

polycyclic groups are built from cyclic groups in a specific way they arise in many contexts within group theory itself but also more generally in algebra for example in the theory of noetherian rings the first half of this book develops the standard group theoretic techniques for studying polycyclic groups and the basic properties of these groups the second half then focuses specifically on the ring theoretic properties of polycyclic groups and their applications often to purely group theoretic situations the book is intended to be a study manual for graduate students and researchers coming into contact with polycyclic groups where the main lines of the subject can be learned from scratch thus it has been kept short and readable with a view that it can be read and worked through from cover to cover at the end of each topic covered there is a description without proofs but with full references of further developments in the area an extensive bibliography then concludes the book

shape grammar and space syntax have been separately developed but rarely combined in any significant way the first of these is typically used to investigate or generate the formal or geometric properties of architecture while the second is used to analyze the spatial topological or social properties of architecture despite the reciprocal relationship between form and space in architecture it is difficult to conceptualize a completed building without a sense of both of these properties the two major computational theories have been largely developed and applied in isolation from each another grammatical and syntactical approaches in architecture emerging research and opportunities is a critical scholarly resource that explores the relationship between shape grammar and space syntax for urban planning and architecture and enables the creative discovery of both the formal and spatial features of an architectural style or type this book furthermore presents a new method to selectively capture aspects of both the grammar and syntax of architecture featuring a range of topics such as mathematical analysis spatial configuration and domestic architecture this book is essential for architects policymakers urban planners researchers academicians and students

does science aim at providing an account of the world that is literally true or objectively true understanding the difference requires paying close attention to metaphor and its role in science in the third lens andrew s reynolds argues that metaphors like microscopes and other instruments are a vital tool in the construction of scientific knowledge and explanations of how the world works more than just rhetorical devices for conveying difficult ideas metaphors provide the conceptual means with which scientists interpret and intervene in the world reynolds here investigates the role of metaphors in the creation of scientific concepts theories and explanations using cell theory as his primary case study he explores the history of key metaphors that have informed the field and the experimental philosophical and social circumstances under which they have emerged risen in popularity and in some cases faded from view how we think of cells as chambers organisms or even machines makes a difference to scientific practice consequently an accurate picture of how scientific knowledge is made requires us to understand how the metaphors scientists use and the social values that often surreptitiously

this book contains most of the nonstandard material necessary to get acquainted with this new rapidly developing area it can be used as a good entry point into the study of representations of quantum groups among several tools used in studying representations of quantum groups or quantum algebras are the notions of kashiwara's crystal bases and luszti's canonical bases mixing both approaches allows us to use a combinatorial approach to representations of quantum groups and to apply the theory to representations of hecke algebras the primary goal of this book is to introduce the representation theory of quantum groups using quantum groups of type  $A_1$  as a main example the corresponding combinatorics developed by misra and miwa turns out to be the combinatorics of young tableaux the second goal of this book is to explain the proof of the generalized leclerc-lascoux-thibon conjecture this conjecture which is now a theorem is an important breakthrough in the modular representation theory of the hecke algebras of classical type the book is suitable for graduate students and research mathematicians interested in representation theory of algebraic groups and

architecture across asia showing how the khans and their families built more than they tore down she demonstrates that the stipulations of the chinese building system were powerful and resilient enough to guide the architecture that rose under mongolian rule drawing on steinhardt s groundbreaking textual research in numerous languages as well as her pioneering fieldwork at sites across east asia yuan will become the standard reference on this critical period of cultural and artistic exchange

the interplay between finite dimensional algebras and lie theory dates back many years in more recent times these interrelations have become even more strikingly apparent this text combines for the first time in book form the theories of finite dimensional algebras and quantum groups more precisely it investigates the ringel hall algebra realization for the positive part of a quantum enveloping algebra associated with a symmetrizable cartan matrix and it looks closely at the beilinson lusztig macpherson realization for the entire quantum  $gl_n$  the book begins with the two realizations of generalized cartan matrices namely the graph realization and the root datum realization from there it develops the representation theory of quivers with automorphisms and the theory of quantum enveloping algebras associated with kac moody lie algebras these two independent theories eventually meet in part 4 under the umbrella of ringel hall algebras cartan matrices can also be used to define an important class of groups coxeter groups and their associated hecke algebras hecke algebras associated with symmetric groups give rise to an interesting class of quasi hereditary algebras the quantum schur algebras the structure of these finite dimensional algebras is used in part 5 to build the entire quantum  $gl_n$  through a completion process of a limit algebra the beilinson lusztig macpherson algebra the book is suitable for advanced graduate students each chapter concludes with a series of exercises

ranging from the routine to sketches of proofs of recent results from the current literature publisher s website
