Terpenes

2006-12-13

this concise overview of terpenes and their applications covers the structure natural sources biological and pharmacological effects as well as selected total syntheses of the compound this book includes a chapter on structure determination as well as added information on biogenesis polycyclic terpenes ginkgoloids and neo hopanes this title is an ideal introductory book for anybody starting work in this field

Flavors for Nutraceutical and Functional Foods

2018-08-06

flavors are an integral part of nutraceutical formulations flavors offer significant advantage to nutraceuticals when it comes to palatability and get an edge over other products in an extremely competitive nutraceutical market flavors for nutraceuticals and functional foods addresses different natural ingredients botanicals used in various functional foods and nutraceutical products the techniques of incorporating flavors in nutraceutical products can be classified as conventional and using recently developed modern techniques such as nanotechnology are also covered in different chapters these techniques are mainly used for masking the taste of nutraceutical and functional food products the book discusses the basics of flavors and the significance of the flavor industry in relation to nutraceuticals this book covers various processes involved in incorporating flavor and improving product acceptability it provides an overview on the potential applications of the main terpene based flavors as part of nutraceuticals formulations this book will serve as a reference to academicians and industry people who are involved in nutraceutical formulations and marketing

The Role of Alternative and Innovative Food Ingredients and Products in Consumer Wellness

2019-07-20

the role of alternative and innovative food ingredients and products in consumer wellness provides a guide for innovative food ingredients and food products the book covers consumer wellness as it relates to food ingredients and functional foods alternative ingredients food products fortified with extracts derived from food processing by products food products based on omega 3 polyunsaturated fatty acids and their health effects selected superfoods and related super diets edible insects microalgae as health ingredients for functional foods and spirulina related products fruit based functional foods pro and pre biotics gluten free products and bioaromas food scientists food technologists and nutrition researchers working on food applications and food processing will find this book extremely useful in addition those interested in the development of innovative products and functional foods will also benefit from this reference as will students who

study food chemistry food science technology and food processing in postgraduate programs connects integrally new and reconsidered food ingredients with innovative food products addresses consumer wellness as it relates to food ingredients and functional foods analyzes food products and processes with the highest market potential

The Chemistry and Biology of Volatiles

2011-06-15

coming to a conclusion this wonderful informative and very interesting book presents an excellent overview of small volatile organic compounds and their role in our life and environment really fascinating is the entirety of scientific disciplines which were addressed by this book flavour and fragrance journal 2011 this book deserves to be a well used reference in the library of any laboratory specialising in voc chemistry world 2011 volatile compounds are molecules with a relatively low molecular weight allowing for an efficient evaporation into the air they are found in many areas of our everyday life they are responsible for the communication between species such as plants insects or mammals they serve as flavours or fragrances in many food products or perfumed consumer articles and they play an important role in atmospheric chemistry this book takes an interdisciplinary approach to volatile molecules review style introductions to the main topics in volatile chemistry and biology are provided by international experts building into a broad overview of this fascinating field topics covered include the structural variety of volatile compounds biogenesis of volatiles synthesis of natural and non natural volatiles analysis of volatiles volatile compounds as semiochemicals in plant plant or plant insect interactions volatiles in pest control pheromones and the influence of volatiles on mammals olfaction and human perception volatiles as fragrances the generation of flavours and food aroma compounds stabilisation and controlled release of volatiles the impact of volatiles on the environment and the atmosphere

Essential Oils

2021-04-12

essential oils contact allergy and chemical composition provides a full review of contact allergy to essential oils along with detailed analyses of the chemical composition of essential oils known to cause contact allergy in addition to literature data this book presents the results of nearly 6 400 previously unpublished sample analyses by far the largest set of essential oils analyses ever reported in a single source of scientific literature covering 91 essential oils and two absolutes the book presents an alphabetical list of all 4 350 ingredients that have been identified in them a list of chemicals known to cause contact allergy and allergic contact dermatitis and tabular indications of the ingredients that can be found in each essential oil the book discusses contact allergy and allergic contact dermatitis for each of the oils and absolutes sometimes able to provide only one or two reports but drawing upon considerable amounts of literature in other cases such as with tea tree oil ylangylang oil lavender oil rose oil

turpentine oil jasmine absolute and sandalwood oil while limited information on the main components and their concentrations would be enough for most dermatologists this book gives extensive coverage not only to improve levels of medical knowledge and quality of patient care but also for the benefit of professionals beyond clinical study and practice such as chemists in the perfume and cosmetics industries perfumers academic scientists working with essential oils and fragrances aromatherapists legislators and those involved in the production sale and acquisition of essential oils

Chemistry of Renewables

2020-10-29

this textbook introduces the industrial production and processing of natural resources it is divided into six major topics fats and oils carbohydrates lignin terpenoids other natural products biorefinery which are divided into a total of 20 chapters each chapter is self contained and therefore a compact learning unit which can be worked on by students in self study or presented by lecturers clear illustrations flow diagrams apparatus drawings and photos facilitate the understanding of the subject matter all chapters end with a succinct summary the take home messages each chapter is supplemented by ten short test questions which can be solved quickly after working through the chapter the answers are at the end of the book all chapters contain bibliographical references that focus on essential textbooks and reference works as a prior knowledge only basic knowledge of chemistry is required

Agarwood

2016-06-01

this book gives readers new information to understand the mechanism of agarwood induction and therefore eradicate the myths surrounding agarwood formation one of the challenges in conserving agarwood resources is species identification in this book taxonomy and systematics of agarwood producing trees from historical and recent perspectives is discussed and tips are given for identifying cultivated species in addition color illustrations are given to highlight vegetative and reproductive characteristics as well as anatomical features for identification purposes of both plant and agarwood sources another challenge that planters are facing is in acquiring the correct method for agarwood induction thus development of agarwood induction technologies will be reviewed a chapter dedicated to bioinduction is included the book will comprise a chapter on the use of non destructive technology as a management tool for cultivating agarwood the book also discusses issues relating to agarwood grades the absence of an international standard that is acceptable by producer and consumer countries further complicates the issue other useful information includes a systematic revelation of agarwood constituents and their complex chemistry and highlights on a specific pharmaceutical property

Bioactive Essential Oils and Cancer

2015-09-10

this volume provides a general overview of the therapeutic potential of the essential oils in cancer and highlights some promising future directions it integrates chemistry pharmacology and medicine while discussing bioactive essential oils in experimental models and clinical studies of cancer the book is a valuable resource for all engaged in the study of natural products and their synthetic derivatives particularly for those interested in academic research and pharmaceutical and food industries dedicated in the discovery of useful agents for the therapy or prevention of cancer

Distilled Spirits

2023-02-13

distilled spirits is the go to guide for identifying the best practices and options available for distilled spirits product development the book is a valuable reference for current and prospective distillers including researchers in distilling and chemical engineering and students brewing and distilling programs with an increase in the number of new start distilleries the need for guidance on distilled spirits production has risen dramatically this book examines the impact of raw materials and production processes on spirit quality flavor and aroma compounds and as indicators of poor quality the book covers the entire production process derivation of flavor and aroma compounds definition of spirit quality and identification of defects for scotch whiskey vodka rum and gin includes chemical methods of analysis for assessing spirit quality presents best practices for designing and running a sensory panel provides identification methods to determine aroma and flavor defects

Chemistry of Natural Products

2022-04-19

plants produce secondary metabolites that humans harness for their own benefit about half of drugs currently in clinical use are based on these chemicals found in nature chemistry of natural products covers secondary metabolites present in medicinal plants and their biosynthesis biological activities and isolation and separation techniques this book is ideal for researchers in the areas of biochemistry medicine and pharmacology

Essential Oils

2023-06-27

essential oils this exciting new volume written and edited by some of the world s foremost experts in the field provides up to date information about the chemical structure of essential oils as well as their therapeutic and biological actions it defines their functional uses while evaluating the

advantages and disadvantages of their application in various sectors essential oils have been used by global communities for centuries for different purposes such as medicinal flavoring preservatives perfumery aromatherapy dentistry cosmetics insecticide fungicide and bactericide among others essential oils are natural and biodegradable substances usually non toxic or with low toxicity to humans essential oils are botanical products that have volatile nature known for their special odor and found to be effective in the treatment of oxidative stress cancer epilepsy skin allergies indigestion headache insomnia muscular pain respiratory problems etc essential oils principally enhance resistance to abiotic stress and protection against aquatic herbivores they possess antimicrobial antifungal antitumor and antioxidant properties essential oils are known to be volatile and susceptible to degradation from various ambient conditions including temperature air light and humidity which limits their applications encapsulation is a proven technique that can protect essential oils and enable their use in various applications this book aims to provide current knowledge on the chemical structure therapeutic and biological activities of essential oils as well as to describe their functional uses and assess the benefits and drawbacks of their usage in various fields by exploring the latest research on essential oils and their encapsulation this book offers valuable insights and practical guidance for anyone interested in the science and application of these fascinating compounds

Handbook of Research on Advanced Phytochemicals and Plant-Based Drug Discovery

2022-06-24

a great deal of interest has been generated recently in the isolation characterization and biological activity of phytochemicals phytochemicals have the potential to enhance pharmaceuticals and drug discovery as such there is an urgent need for current research in the global scope of phytochemicals including the chemical and physical characteristics analytical procedures biological activity safety and industrial applications the handbook of research on advanced phytochemicals and plant based drug discovery examines the applications of bioactive molecules from a health perspective examining the pharmacological aspects of medicinal plants the phytochemical and biological activities of different natural products and ethnobotany and medicinal properties moreover it presents a novel dietary approach for human disease management covering topics such as computer aided drug design government regulation and medicinal plant taxonomy this major reference work is beneficial to pharmacists medical practitioners phytologists hospital administrators government officials faculty and students of higher education librarians researchers and academicians

The Chemistry of Plants: Perfumes, Pigments and Poisons 2nd Edition

2021-02-05

this new edition of a popular book eases access to organic chemistry by connecting it with the world of plants and their colours fragrances and defensive mechanisms

The Chemistry of Plants

2015-10-20

this book is an introduction to organic chemistry and its compounds as related to plants chemistry tends to be seen as a field that is hard to comprehend and that has few connections with the living world this book fills a gap as it eases access to organic chemistry by connecting it with plants and includes numerous photos and other illustrations the book is a combination of organic chemistry with the living world of plants and is an introduction to organic plant compounds for the non chemist it starts with a review of basic concepts of chemistry as they relate to plant life followed by an introduction to structures of organic compounds which prepares the reader for the following chapters on primary metabolites and on plant fragrances pigments and plant defensive compounds the final chapter relates plant compounds to human life with subchapters on foods from plants medicines psychoactives fibers and dyes historic discoveries of plant compounds and their developments to contemporary uses like modern pharmaceuticals and a section on genetically modified plants connect with topics of recent interest the book leads the serious reader from chemistry basics to complex plant substances and their human uses and plant photos and stories accompany chemistry topics and chemical structures to aid understanding the author an organic chemist and plant enthusiast has taught popular undergraduate college level courses on plant chemistry to non chemistry majors and numerous field seminars to the general public for more than fifteen years the book s topics and contents have been taught for many years and have proved successful in providing an understanding of plant compounds organic compounds and their importance the book provides a basis for a better understanding of chemistry and its connections to the world of plants the natural world in general and to daily life it is aimed at non chemistry undergraduate students and to people in general who are interested in plants and who would like to learn more about them it addresses an audience with little previous chemistry knowledge yet leads the serious reader to an understanding of sometimes complex plant compounds by providing an introduction to chemistry basics combining the chemistry with pictures and stories and using simple clear language the book can be used both as a text to introduce organic chemistry as it relates to plants and as a text of reference for more advanced readers

Lipids and Essential Oils as Antimicrobial Agents

2010-12-28

lipids and essential oils have strong antimicrobial properties they kill or inhibit the growth of microbes such as bacteria fungi or viruses they are being studied for use in the prevention and treatment of infections as potential disinfectants and for their preservative and antimicrobial properties when formulated as pharmaceuticals in food products and in

cosmetics lipids and essential oils as antimicrobial agents is a comprehensive review of the scientific knowledge in this field international experts provide summaries on the chemical and biological properties of lipids and essential oils use of lipids and essential oils in pharmaceuticals cosmetics and health foods antimicrobial effects of lipids in vivo and in vitro antimicrobial lipids in milk antimicrobial lipids of the skin antibacterial lipids as sanitizers and disinfectants antibacterial antifungal and antiviral activities of essential oils antimicrobial lipids in milk antimicrobial lipids of the skin antibacterial lipids as sanitizers and disinfectants antibacterial antifungal and antiviral activities of essential oils lipids and essential oils as antimicrobial agents is an essential guide to this important topic for researchers and advanced students in academia and research working in pharmaceutical cosmetic and food sciences biochemistry and natural products chemistry microbiology and for health care scientists and professionals working in the fields of public health and infectious diseases it will also be of interest to anyone concerned about health issues and particularly to those who are conscious of the benefits of health food and natural products

Monomers, Polymers and Composites from Renewable Resources

2011-10-10

the progressive dwindling of fossil resources coupled with the drastic increase in oil prices have sparked a feverish activity in search of alternatives based on renewable resources for the production of energy given the predominance of petroleum and carbon based chemistry for the manufacture of organic chemical commodities a similar preoccupation has recently generated numerous initiatives aimed at replacing these fossil sources with renewable counterparts in particular major efforts are being conducted in the field of polymer science and technology to prepare macromolecular materials based on renewable resources the concept of the bio refinery viz the rational exploitation of the vegetable biomass in terms of the separation of its components and their utilisation as such or after suitable chemical modifications is thus gaining momentum and considerable financial backing from both the public and private sectors this collection of chapters each one written by internationally recognised experts in the corresponding field covers in a comprehensive fashion all the major aspects related to the synthesis characterization and properties of macromolecular materials prepared using renewable resources as such or after appropriate modifications thus monomers such as terpenes and furans oligomers like rosin and tannins and polymers ranging from cellulose to proteins and including macromolecules synthesized by microbes are discussed with the purpose of showing the extraordinary variety of materials that can be prepared from their intelligent exploitation particular emphasis has been placed on recent advances and imminent perspectives given the incessantly growing interest that this area is experiencing in both the scientific and technological realms discusses bio refining with explicit application to materials replete with examples of applications of the concept of sustainable development

presents an impressive variety of novel macromolecular materials

Ethnobotany and Ethnopharmacology of Medicinal and Aromatic Plants

2023-08-31

medicinal and aromatic plants are beneficial to human health plant derived molecules possess biological activities that can be used to prevent many infectious diseases and metabolic disorders ethnobotany and ethnopharmacology of medicinal and aromatic plants summarizes techniques and methods used to study the biological activities of plant derived extracts and compounds to study ethnobotanical and ethnopharmacological features of medicinal and aromatic plants this book includes computational approaches to study the pharmacological properties of biomolecules in medicinal and aromatic plants details methods in ethnopharmacology including chromatographical and analytical techniques demonstrates trends in sustainable use and management of medicinal and aromatic plants features information on databases and tools used in computational phytochemistry for drug designing and discovery elucidates the importance of phytochemicals as immunomodulators in herbal drug development including their nanoformulations a volume in the exploring medicinal plants series ethnobotany and ethnopharmacology of medicinal and aromatic plants will be of interest to those working with plant extracts including botanists and ethnobotanists pharmacologists and ethnopharmacologists as well as scientists and researchers interested in natural compounds and their potential applications

Biology of Genus Boswellia

2019-05-07

this book provides insight into the biology and genomics of the genus boswellia family burseraceae a natural resource used for the production of frankincense an oleo gum resin the boswellia species are ecologically medicinally commercially and culturally important significantly contributing to the paucity of comprehensive literature on this genus this volume provides a detailed discussion on the genomics physiology and ecology of boswellia the chapters cover a wide range of topics including taxonomy distribution genetic diversity and microbiology the production process of frankincense and its impact on the species are presented as well in light of the recent decline of various boswellia populations species propagation and conservation are discussed plant scholars ecologists and conservation biologists will find this book to be an important and informative reference

Plant Secondary Metabolites, Three-Volume Set

2017-01-06

plant secondary metabolites are organic compounds that aid in the growth and development of plants but are not required for the plant to survive by

fighting off herbivores pests and pathogens these plant secondary metabolites have been used since early times in various medicines and food products for beneficial health purposes and are still relevant and popular today this new three volume plant secondary metabolites provides an abundance of valuable information on secondary metabolites their health properties and possibilities and their extraction and application methods

Supercritical Fluid Technology for Energy and Environmental Applications

2013-12-21

supercritical fluid technology for energy and environmental applications covers the fundamental principles involved in the preparation and characterization of supercritical fluids scfs used in the energy production and other environmental applications energy production from diversified resources including renewable materials using clean processes can be accomplished using technologies like scfs this book is focused on critical issues scientists and engineers face in applying scfs to energy production and environmental protection the innovative solutions they have found and the challenges they need to overcome the book also covers the basics of sub and supercritical fluids like the thermodynamics of phase and chemical equilibria mathematical modeling and process calculations a supercritical fluid is any substance at a temperature and pressure above its critical point where distinct liquid and gas phases do not exist at this state the compound demonstrates unique properties which can be fine tuned making them suitable as organic solvents in a range of industrial and laboratory processes this volume enables readers to select the most appropriate medium for a specific situation it helps instructors prepare course material for graduate and postgraduate courses in the area of chemistry chemical engineering and environmental engineering and it helps professional engineers learn supercritical fluid based technologies and use them in solving the increasingly challenging environmental issues relates theory chemical characteristics and properties of the particular supercritical fluid to its various applications covers the fundamentals of supercritical fluids like thermodynamics of phase and chemical equilibria mathematical modeling and process calculations includes the most recent applications of supercritical fluids including energy generation materials synthesis and environmental protection

Biotechnology of Bioactive Compounds

2015-04-20

bioactive compounds play a central role in high value product development in the chemical industry bioactive compounds have been identified from diverse sources and their therapeutic benefits nutritional value and protective effects in human and animal healthcare have underpinned their application as pharmaceuticals and functional food ingredients the orderly study of biologically active products and the exploration of potential biological

activities of these secondary metabolites including their clinical applications standardization quality control mode of action and potential biomolecular interactions has emerged as one of the most exciting developments in modern natural medicine biotechnology of bioactive compounds describes the current stage of knowledge on the production of bioactive compounds from microbial algal and vegetable sources in addition the molecular approach for screening bioactive compounds is also discussed as well as examples of applications of these compounds on human health the first half of the book comprises information on diverse sources of bioactive compounds ranging from microorganisms and algae to plants and dietary foods the second half of the book reviews synthetic approaches as well as selected bioactivities and biotechnological and biomedical potential the bioactive compounds profiled include compounds such as c phycocyanins glycosides phytosterols and natural steroids an overview of the usage of bioactive compounds as antioxidants and anti inflammatory agents anti allergic compounds and in stem cell research is also presented along with an overview of the medicinal applications of plant derived compounds biotechnology of bioactive compounds will be an informative text for undergraduate and graduate students of bio medicinal chemistry who are keen to explore the potential of bioactive natural products it also provides useful information for scientists working in various research fields where natural products have a primary role

Advances in Extraction and Applications of Bioactive Phytochemicals

2022-11-30

advances in extraction and applications of bioactive phytochemicals presents comprehensive and systematic coverage of extraction techniques for bioactive phytochemical compounds and their delivery and therapeutic effectiveness sections focus on the pharmaceutical industry s perspective aiming at compiling recent advances of natural products in the field of drug delivery including a brief overview of plant based bioactive molecules utilization of different plant elements for the extraction of phytochemicals a compilation of conventional extraction approaches advanced extraction methods including supercritical carbon dioxide extraction computational methods to improve production drug delivery aspects of bioactive phytochemicals their therapeutic effectiveness and more this book is a complete reference targeted at pharma researchers in academic and corporate environments and those willing to apply the most current extraction methods and health applications researchers in medicinal chemistry and chemical engineering will also benefit from this comprehensive resource offers a consistent compilation of the most current phytochemical extraction techniques includes detailed protocols for extraction covers the main classes of naturally occurring bioactive phytochemical compounds

Stress Biology in Photosynthetic Organisms

2016-04-22

industrial biorenewables a practical viewpoint this unique text provides an in depth industrial view in its discussion of industrial biorenewables industries report on real cases of biorenewables dealing with economics the motivation of implementing industrial biorenewable based processes and suggestions for further improvement and research includes industrial perspectives by scientists working on biorenewable technology in industry with a clear commercial focus spans basic research to commercialization of processes and everything in between provides key information for academic groups working in the area by covering the way industrial scientists tackle problems showcases patented technologies across diverse industries shares the motivation of implementing industrial biorenewable based processes and suggests options for further improvement and research serves as a guide for industries and academic groups providing crucial information for the setup of future biobased industrial concepts industrial biorenewables provides a state of the art perspective offering a unique viewpoint from which a range of industries report on real cases of biorenewables demonstrate their technologies share the motivation of implementing a certain industrial biorenewable based processes and suggest options for further improvement and research with an in depth industrial viewpoint the book serves as a key guide for industries and academic groups providing crucial information for the setup of future biobased industrial concepts

Industrial Biorenewables

2013-11-08

chemistry the key to our sustainable future is a collection of selected contributed papers by participants of the international conference on pure and applied chemistry icpac 2012 on the theme of chemistry the key for our future held in mauritius in july 2012 in light of the significant contribution of chemistry to benefit of mankind this book is a collection of recent results generated from research in chemistry and interdisciplinary areas it covers topics ranging from nanotechnology natural product chemistry to analytical and environmental chemistry chemistry the key to our sustainable future is written for graduates postgraduates researchers in industry and academia who have an interest in the fields ranging from fundamental to applied chemistry

Chemistry: The Key to our Sustainable Future

2023-02-20

essential oils are simply the volatile oils of plants these are concentrated liquids contain many terpenes alkaloids and alcohols etc various compounds of essential oils have bioactive properties such as antimicrobial anti cancer anti diabetic anti viral and anti fungal etc this book describes the sources of essential oils extraction and production method characterizing tools bioactivity and various applications in the field of industries daily usage agriculture health and food

Essential Oils

2017-03-01

pharmacognosy fundamentals applications and strategies explores a basic understanding of the anatomy and physiology of plants and animals their constituents and metabolites this book also provides an in depth look at natural sources from which medicines are derived their pharmacological and chemical properties safety aspects and how they interact with humans the book is vital for future research planning helping readers understand the makeup function and metabolites of plants in a way where the history of their usage can be linked to current drug development research including in vitro in vivo and clinical research data by focusing on basic principles current research and global trends this book provides a critical resource for students and researchers in the areas of pharmacognosy pharmacy botany medicine biotechnology biochemistry and chemistry covers the differences between animal and plant cells to facilitate an easier transition to how the body interacts with these entities contains practice questions and laboratory exercises at the end of every chapter to test learning and retention provides a single source that covers fundamental topics and future strategies with the goal of enabling further research that will contribute to the overall health and well being of mankind

Pharmacognosy

2011-01-19

recent advances in the synthesis of morphine and related alkaloids by n chida opioids in preclinical and clinical trials by h nagase and h fujii synthesis of 14 alkoymorphinan derivatives and their pharmacological actions by h schmidhammer and m spetea 14 amino 4 5 epoxymorphinan derivatives and their pharmacological actions by j w lewis and s m husbands nonpeptidic delta δ opioid agonists and antagonists of the diarylmethylpiperazine class what have we learned by s n calderon synthesis of neoclerodane diterpenes and their pharmacological effects by k m lovell k m prevatt smith a lozama and t e prisinzano synthesis of novel basic skeletons derived from naltrexone by h nagase and h fujii twin and triplet drugs in opioid research by h fujii 3d pharmacophore identification for κ opioid agonists using ligand based drug design techniques by n yamaotsu and s hirono

Chemistry of Opioids

2020-11-20

the food processing industries produce millions of tons of losses and waste during processing which are becoming a grave economic environmental and nutritional problem fruit vegetable and food industrial solid waste include leaves peels pomace skins rinds pulp stems seeds twigs and spoiled fruits and vegetables among other waste released in food production which can be formed during cleaning processing cooking and or packaging these wastes are characterized by being an important source of bioactive compounds such as

phenolic compounds dietary fibers polysaccharides vitamins carotenoids pigments and oils among others these bioactive compounds are closely associated with beneficial effects on human health these by products can be exploited in different industries in food industries for the development of functional ingredients and or new foods or natural additives in pharmaceutical industries for medicinal healthcare or cosmetic products in agricultural industries as fertilizers or animal feed and in chemical industries among others the reutilization of these by products will ensure the sustainable development of food industries and reduce their environmental impact which will contribute to the fight against environmental problems leading to potential mitigation of climatic change therefore the determination of bioactive compound composition in agricultural and food waste and the production of extracts containing these compounds is the first step towards its reutilization

Agricultural and Food Waste

2021-03-30

plant based functional foods and phytochemicals from traditional knowledge to present innovation covers the importance of the therapeutic health benefits of phytochemicals derived from plants it discusses the isolation of potential bioactive molecules from plant sources along with their value to human health it focuses on physical characteristics uniqueness uses distribution traditional and nutritional importance bioactivities and future trends of different plant based foods and food products functional foods beyond providing basic nutrition may offer a potentially positive effect on health and cures for various disease conditions such as metabolic disorders including diabetes cancer and chronic inflammatory reactions the volume looks at these natural products and their bioactive compounds that are increasingly utilized in preventive and therapeutic medications and in the production of pharmaceutical supplements and as food additives to increase functionality it also describes the concept of extraction of bioactive molecules from plant sources both conventional and modern extraction techniques available sources biochemistry structural composition and potential biological activities

Plant-Based Functional Foods and Phytochemicals

2012-12-15

polypeptide polymer conjugates by henning menzel chemical strategies for the synthesis of protein polymer conjugates by björn jung and patrick theato glycopolymer conjugates by ahmed m eissa and neil r cameron dna polymer conjugates from synthesis through complex formation and self assembly to applications by dawid kedracki ilyès safir nidhi gour kien xuan ngo and corinne veber nardin synthesis of terpene based polymers by junpeng zhao and helmut schlaad

Bio-synthetic Polymer Conjugates

2012-05-08

based on the award winning wiley encyclopedia of chemical biology this book provides a general overview of the unique features of the small molecules referred to as natural products explores how this traditionally organic chemistry based field was transformed by insights from genetics and biochemistry and highlights some promising future directions the book begins by introducing natural products from different origins moves on to presenting and discussing biosynthesis of various classes of natural products and then looks at natural products as models and the possibilities of using them in medicine

Natural Products in Chemical Biology

2017-04-28

this book explains the natural chemical compounds that determine the fascinating interactions between plants and insects providing a gentle and absorbing introduction to organic chemistry

The Chemistry of Plants and Insects

2023-12-28

this volume presents the recent developments in synthetic biodegradable and biobased polymers the syntheses of many polymer types such as polyesters and polyamides and also their processing technologies are discussed herein and new aspects from fundamental and from industrial research are covered this combination of both perspectives within this volume will be of interest for many research scientists from academia and industry and also for lectures and teachers chapters biobstm polybutylene succinate and polymer biodegradability 2 0 a holistic view on polymer biodegradation in natural and engineered environments are available open access under a creative commons attribution 4 0 international license via link [springer.com](https://www.springer.com) for further details see license information in the chapter

Synthetic Biodegradable and Biobased Polymers

2022-06-15

essential reference for researchers and experts in industry highlighting the rapidly growing field of hydroxyapatite based catalysts and their application in various chemical processes hydroxyapatite $\text{Ca}_{10}\text{PO}_4\text{OH}_2$ is the main mineral component of human and animal bones it is largely applied in the field of biomaterials due to its biocompatibility recently hydroxyapatite based materials have especially gained a lot of attention by researchers in catalysis as they are versatile and have shown precious properties of a good catalyst and catalyst support such as excellent ion exchange capacity high porosity very low water solubility controlled basicity acidity and good

thermal stability at high temperatures design and applications of hydroxyapatite based catalysts gives a detailed overview of the synthesis characterization and use of hydroxyapatite based materials in catalysis it covers synthetic hydroxyapatites from pure chemicals or waste natural apatites and materials from eggshells and animal bones the application of hydroxyapatite based catalysts in selective oxidation deoxygenation selective hydrogenation dehydrogenation reactions organic synthesis as well as reforming processes and production of energy carriers is reviewed moreover electrocatalysis and photocatalysis using hydroxyapatite based materials are discussed kinetic and mechanism studies of various chemical processes over hydroxyapatite based catalysts are also presented this is the first book solely dedicated to hydroxyapatite based materials and their use in catalysis covers synthesis and characterization surface and structure studies kinetic and mechanism aspects and various applications in heterogeneous catalysis electrocatalysis and photocatalysis aimed at further stimulating research in the field design and applications of hydroxyapatite based catalysts is an indispensable source of information for researchers in academia and industry working in catalysis

Design and Applications of Hydroxyapatite-Based Catalysts

2017-04-18

this book offers authoritative contributions by world experts actively working on different aspects of phototrophic prokaryotes providing up to date information in this rapidly advancing field it covers the range of topics that are currently the focus of research with this group of organisms as essentially single celled organisms phototrophic prokaryotes process many environmental signals and use this information to optimize their metabolism growth rate dna replication and cell division phototrophic prokaryotes are collectively of great interest for a number of different fundamental and applied perspectives and have long served as models for understanding such basic fundamental biological processes as photosynthesis and respiration on an ecological environmental level they are extremely important being the most abundant photosynthetic organisms on earth and responsible for the majority of the primary productivity in the oceans they also hold great promise as biotechnological catalysts being able to couple solar energy conversion through photosynthesis and carbon fixation to the production of biofuels commodity chemicals and nutraceuticals the book is recommended to advanced students and scientists dealing with life sciences especially in genetics microbiology and molecular biology

Modern Topics in the Phototrophic Prokaryotes

2012-04-16

auf fortgeschrittenem niveau und mit didaktischem anspruch bietet ihnen dieser band zahlreiche fragen mit antworten und eine breite palette von fallstudien aus der industrie ergnzt durch weiterfhrende literaturhinweise

und referenzen der originalliteratur insbesondere geht es um die modernsten katalytischen prozesse mit ihren anwendungen in der pharmazie und der feinchemikalien industrie wobei auch kommerzielle aspekte besprochen werden der autor ein erfahrener dozent mit industriepraxis legt chemikern und chemieingenieuren damit ein praxistaugliches hilfsmittel vor

Applied Homogeneous Catalysis

2020-03-06

this book is indexed in chemical abstracts service green chemistry has evolved in response to several environmental issues in the second half of the last century mostly due to the almost freely expanding chemical petrochemical and pharmaceutical industries during the past two decades green chemistry grew rapidly and we can now consider this area as a mature and powerful field tremendous development has taken place in many important areas including renewable energy and resources reaction environments catalysis synthesis chemical biology green polymers and facile recycling the combination of green chemistry with engineering biology toxicology and physics will lead to novel interdisciplinary systems which can now lift green chemistry to the next advanced level the editors have assembled authors among the best specialists of this growing area of research this collection of reviews and perspectives provides an exciting vision of the more recent developments in green chemistry the contents of this book illustrate the breath of the field and its role to address environmental issues this volume will serve as a book of reference showing a panoramic view of the field and a preview of its future direction as well as a book of inspiration for those aiming to further advance its frontiers this volume emphasizes on the most recent developments in green catalysis bio sourced polymers and the study of continental organic matter for a better understanding of the carbon geochemical cycle

Advanced Green Chemistry - Part 2: From Catalysis To Chemistry Frontiers

2020-08-28

the use of chemistry in archaeology can help archaeologists answer questions about the nature and origin of the many organic and inorganic finds recovered through excavation providing valuable information about the social history of humankind this textbook tackles the fundamental issues in chemical studies of archaeological materials examining the most widely used analytical techniques in archaeology the third edition of this comprehensive textbook features a new chapter on proteomics capturing significant developments in protein recognition for dating and characterisation the textbook has been updated to encompass the latest developments in the field the textbook explores several archaeological investigations in which chemistry has been employed in tracing the origins of or in studying artefacts and includes chapters on obsidian ceramics glass metals and resins it is an essential companion to students in archaeological science and chemistry as well as to archaeologists and those involved in conserving human artefacts

Archaeological Chemistry

biopolymers could be either natural polymers polymer naturally occurring in nature such as cellulose or starch or biobased polymers that are artificially synthesized from natural resources since the late 1990s the polymer industry has faced two serious problems global warming and anticipation of limitation to the access to fossil resources one solution consists in the use of sustainable resources instead of fossil based resources hence biomass feedstocks are a promising resource and biopolymers are one of the most dynamic polymer area additionally biodegradability is a special functionality conferred to a material bio based or not very recently facing the awareness of the volumes of plastic wastes biodegradable polymers are gaining increasing attention from the market and industrial community this special issue of molecules deals with the current scientific and industrial challenges of natural and biobased polymers through the access of new biobased monomers improved thermo mechanical properties and by substitution of harmful substances this themed issue can be considered as collection of highlights within the field of natural polymers and biobased polymers which clearly demonstrate the increased interest in this field we hope that this will inspire researchers to further develop this area and thus contribute to futures more sustainable society

Natural Polymers and Biopolymers II
