the azores archipelago in the atlantic ocean is composed of nine volcanic islands and são miguel is the largest and most volcanically active during the past 5000 years several eruptions have taken place on the three active central volcanoes sete cidades fogo and furnas and in the basaltic fissure systems of picos and congro there is evidence that furnas was in eruption when the first settlers arrived some time between 1439 and 1443 in the sixteenth and seventeenth centuries there were two explosive sub plinian eruptions fogo in 1563 and furnas in 1630 the last eruption on land occurred in the picos fissural volcanic system in 1652 involving the extrusion of lava domes in 22 chapters this volume considers the volcanic geology of the island under the headings of geological setting volcanic history geological hazards and risk assessment volcano monitoring and natural resources

the symposium on which this volume was based brought together approximately fifty scientists from a variety of backgrounds to discuss the rapidly emerging set of competing technologies for exploiting a massive quantity of textual information this group was challenged to explore new ways to take advantage of the power of on line text a billion words of text can be more generally useful than a few hundred logical rules if advanced computation can extract useful information from streams of text and help find what is needed in the sea of available material while the extraction task is a hot topic for the field of natural language processing and the retrieval task is a solid aspect in the field of information retrieval these two disciplines came together at the symposium and have been cross breeding more than ever the book is organized in three parts the first group of papers describes the current set of natural language processing techniques used for interpreting and extracting information from quantities of text the second group gives some of the historical perspective methodology and current practice of information retrieval work the third covers both current and emerging applications of these techniques this collection of readings should give students and scientists alike a good idea of the current techniques as well as a general concept of how to go about developing and testing systems to handle volumes of text

we have identified a need to draw together knowledge of physiochemical and biological aspects of pollution in tropical aquatic systems this book results from this and we hope will assist in providing management strategies to protect these systems from pollution effects in organising the book we have as far as possible attempted to cover the range of topics important in understanding pollution in tropical areas authors who are expert in their particular fields have been invited to contribute we recognise that many topics remain uncovered but we hope will serve to assist in identifying these and stimulate interest in this area
