the rovm manual a user guide for observation class remotely operated vehicles is the first manual to provide a basic how to for using small observation class rovs for surveying inspection and research procedures it serves as a user guide that offers complete training and information about rovm operations for technicians underwater activities enthusiasts and engineers working offshore the book focuses on the observation class rovm and underwater uses for industrial recreational commercial and scientific studies it provides information about marine robotics and navigation tools used to obtain mission results and data faster and more efficiently this manual also covers two common denominators the technology and its application it introduces the basic technologies needed and their relationship to specific requirements and it helps identify the equipment essential for a cost effective and efficient operation this user guide can be invaluable in marine research and surveying crime investigations harbor security military and coast guarding commercial boating diving and fishing nuclear energy and hydroelectric inspection and rovm courses in marine and petroleum engineering the first book to focus on observation class rovm remotely operated vehicle underwater deployment in real conditions for industrial commercial scientific and recreational tasks a complete user guide to rovm operation with basic information on underwater robotics and navigation equipment to obtain mission results quickly and efficiently ideal for anyone involved with rovm complete with self learning questions and answers

this ibm redbooks publication helps you install configure and maintain the ibm z13tm the z13 offers new functions that require a comprehensive understanding of the available configuration options this book presents configuration setup scenarios and describes implementation examples in detail this publication is intended for systems engineers hardware planners and anyone who needs to understand ibm z systemstm configuration and implementation readers should be generally familiar with current ibm z systems technology and terminology for details about the functions of the z13 see ibm z13 technical introduction sg24 8250 and ibm z13 technical guide sg24 8251

new and improved version of the naval surface warfare center dahlgren division aeroprediction code ap93 has been developed the new code contains new technology that allows planar aerodynamics of axisymmetric solid rocket type weapons to be computed with engineering accuracy over the entire mach number range and for angles of attack to 30 deg new technology developed and included in the ap93 includes a new engineering method to compute aeroheating information at a high mach number extension of the second order shock expansion theory to include real gas effects including several new pressure prediction techniques an improved body alone nonlinear normal force method new methods for computing nonlinear aerodynamics of wing alone wing body and body wing due to angle of attack and wing body due to control deflection and a new base dmg database and improved empirical base drag estimation technique aeroprediction code ap93 planar aerodynamics high mach number

digital business has been driving the transformation of underlying information technology it infrastructure to be more efficient secure adaptive and integrated it must be able to handle the explosive growth of mobile clients and employees it also must be able to process enormous amounts of data to provide deep and real time insights to help achieve the greatest business impact this ibm redbooks publication addresses the new ibm z systemstm single frame the ibm z13s server ibm z systems servers are the trusted enterprise platform for integrating data transactions and insight a data centric infrastructure must always be available with a 99 999 or better availability have flawless data integrity and be secured from misuse it needs to be an integrated infrastructure that can support new applications it also needs to have integrated capabilities that can provide new mobile capabilities with real time analytics delivered by a secure cloud infrastructure ibm z13s servers are designed with improved scalability performance security resiliency availability and virtualization the superscalar design allows z13s servers to deliver a record level of capacity over the prior single frame z systems

the report contains the description of the mad i language and user s guide for mad i in mts michigan terminal system the pre defined mad i language described in the report is a procedure oriented algebraic language designed for general purpose use it is styled after such languages as algol 60 mad and pl i mad i is also intended as a convenient base language for extension by a definitional facility the language anticipates the definition or re definition of data types and structures statements operators and operations the definitional facility itself is not described the user s guide shows how to compile and run mad i programs in mts sample runs are included there is also a description of a compiler feature which allows assembler code for the ibm 360 to be compiled within a mad i program

this report forms the user s guide for version 4.0 of npsol a set of fortran subroutines designed to minimize a smooth function subject to constraints which may include simple bounds on the variables linear constraints and smooth nonlinear constraints npsol may also be used for unconstrained bound constrained and linearly constrained optimization the user must provide subroutines that define the objective and constraint functions and optionally their gradients all matrices are treated as dense and hence npsol is not intended for large sparse problems npsol uses a sequential quadratic programming sqp algorithm in which the search directions is the solution of a quadratic programming qp subproblem the algorithm treats bounds linear constraints and nonlinear constraints separately the hessian of each qp subproblem is a positive definite quasi newton approximation to the hessian of the lagrangian function the steplength at each iteration is required to produce a sufficient decrease an augmented lagrangian merit function each qp subproblem is solved using a quadratic programming package with several features that improve the efficiency of an sqp algorithm author
