Monthly Catalog of United States Government Publications 1979 this book brings together past insights current research and promising future trends associated with distributed computing artificial intelligence and their application in order to provide efficient solutions to real world problems the book is based on the international conference on distributed computing and artificial intelligence 2020 dcai 2020 which provided a forum to present applications of innovative techniques for studying and solving complex problems in artificial intelligence and computing areas it includes contributions on well established and evolving areas of research by authors from 26 countries representing a truly wide area network of research activity

Mental Health Digest 1972 many treatments have been suggested the physi the subject we deal with here is male baldness often still termed androgenic or androgenetic baldness cian or surgeon desirous of treating baldness must very important research studies have shown that therefore be acquainted with and practice all these practically 980 0 of men who are losing or who have techniques lost their hair have at some time or other taken steps male baldness is in fact not a single entity but to try to arrest this process in other words only consists of numerous types each calls for its specific those who are not affected by baldness are indiffer treatment and the aim of a good classification ent to it and it is surprising how many preventive should be to take account of the greatest number of factors or at least the more important ones as sim consultations are sought by people whose hair is normal but who are simply afraid that the day may ply as possible come when they will lose it the surgeon s own experience will fill in any gaps it is precisely because the ideal procedure pre in the knowledge that ultimately it is as important to ventive as well as curative does not yet exist that so treat the scalp as what is beneath it the brain anatomy hair cells melanocytes derived from the neural crest

Problems of Drug Dependence 1992 [broken image placeholder]

Distributed Computing and Artificial Intelligence, Special Sessions, 17th International Conference 2020-07-28 this book will be a valuable source of information for those concerned with rural and farm tourism sustainable tourism and the marketing of calibri local gastronomy it presents cases with an international and interdisciplinary approach in order to provide ideas for strategic perspectives in tourism studies furthermore for the first time the complex fields of rural and food tourism are examined from an international italy and germany viewpoint this book explores ways in which gastronomical heritage i e regional food organic food can be incorporated in rural tourism above all farm tourism and development policies as well as in new avenues of research e g sensory marketing online marketing in order to enhance sustainable practices both in the tourism and in

the agri food sector overall the book presents an overview of benchmark practices for professionals associations of rural tourism farmers etc while offering scholars a well founded source to refer to in order to gain up to date insights into the state of the art of studies on rural and food tourism

Proceedings, the 1990 International Symposium on Radon and Radon Reduction Technology: (Sessions 5-9) 1991 sessions 9 13 discusses subjects in the field of cryogenics vacuum metallurgy sputtering gettering adsorption desorption and space simulation the development and functional description of a cryo pump is covered in the first section of the book the second section covers the measurement of the pumping speed of a cryo surface cooled with liquid nitrogen the third topic is the examination of the cryo getter pump the van arkel method is the transformation of a crude metal to a halogen compound this method is broadly covered in the volume a section of the text focuses on the production of copper castings of great purity another section described the new developments in electron beam welding under vacuum triode sputtering is then discussed in detail the heat of chemisorption of carbon monoxide on polycrystalline nickel is carefully investigated this is followed by a description of the xenon collector the book can provide valuable insights to physicists chemists engineers students and researchers

Hair Replacement Surgery 2012-12-06 this work presents one of the original and fundamental experiments of didactique a research program whose underlying tenet is that mathematics education research should be solidly based on scientific observation here the observations are of a series of adventures that were astonishing for both the students and the teachers the reinvention of fractions and of decimal numbers in a sequence of lessons and situations that permitted the students to construct the concepts for themselves the book leads the reader through the highlights of the sequence s structure and some of the reasoning behind the lesson choices it then presents explanations of some of the principal concepts of the theory of situations in the process it offers the reader the opportunity to join a lively set of fifth graders as they experience a particularly attractive set of lessons and master a topic that baffles many of their contemporaries

Monthly Catalogue, United States Public Documents 1978 chronic degenerative diseases are one of the major public health problems particularly those affecting the nervous system they are characterized by the degeneration of specific cell populations that include several pathologies which contribute significantly to morbidity and mortality in the elderly population therefore in recent years the study of neuroscience has gained significant importance most of these neurodegenerative disorders are the result of a complex interaction between genetic and environmental factors that generate progression and can even determine its severity the presence of mutations in genes as lrrk2 snca park7 park2 or pink1 is associated with parkinson s disease mutations in genes such as app ps1 and ps2 are associated with familial alzheimer s disease while htt gene mutations are the cause of huntington s disease in most cases this condition is inherited in an autosomal dominant pattern which means one copy of the altered gene in each cell is sufficient to cause the disorder it is known that these mutations can also alter the proteins function however it has not yet been possible to fully understand how some genetic changes cause the disease or influence the risk of developing these disorders most

symptoms seen in these conditions occurs when specific nerve cells are damaged or die generating a loss in brain communication also many of these mutations generate aggregation of intracellular or extracellular proteins affecting cell function and eventually causing neuronal death it is unclear whether the presence of these aggregates play an important role in nerve cell death during the development of neurodegenerative diseases or if they are simply part of the response of cells to the disease other mutations affect the mitochondrial function generating alterations in energy production and promoting the formation of unstable molecules such as free radicals under normal conditions the harmful effects caused by free radicals are offset within the cell however in pathological conditions the presence of mutations can alter this process by allowing the accumulation of radicals and damaging or killing cells on the other hand we also know that these diseases may not have a direct genetic component thus the study of sporadic type neurodegenerative diseases is much more complex histopathological lesions as well as the cellular and molecular alterations are generally indistinguishable from familial cases for this reason it is important to understand the genetic and molecular mechanisms associated with this type of pathologies in this sense this issue aims to understand the molecular processes that occur in the brain and how these are influenced by the environment genetics and behavior

The Stationery Office Annual Catalogue 2002 it is estimated that 80 percent of women have some degree of cellulite although there are no permanent solutions for cellulite dermatologists recognize that this is an issue of importance for many women this guide reviews current research on the pathophysiology and treatment of cellulite as well as the many recent developments in medical therapy liposculpture and pharmacy to combat the appearance of cellulite in the female figure

Proceedings of the Second Symposium on Advanced Propulsion Concepts: Unclassified sessions 1960 chronological list 1646 1800 of books pamphlets and periodicals not listed in american bibliography charles evans

Collection of Extended Abstracts Presented at ICMUA Sessions and IUGG Symposium 18 1980 the alopecias diagnosis and treatments provides a practical answer to most diagnostic and therapeutic matters related to the different types of alopecia physicians may encounter in daily practice it also presents a clear classification of all the types of alopecia among the topics covered are diffuse alopecia traumatic alopecia the male patient with androgenetic alopecia the female patient with androgenetic alopecia cicatricial alopecia alopecia areata congenital alopecia and specific problems posed by alopecia in patients of african and asian origin the book s chapters are divided into four major categories the first one reviews biology and hair investigations the second is dedicated to clinical pathology describes various hair diseases including all major pathological conditions of the scalp affecting hair growth the third emphasizes the role of aesthetic and reconstructive hair transplantation or scalp surgery and the fourth covers cosmetic treatment new medical innovations and the latest procedures in aesthetic surgery this book will help you understand the basic pathophysiology clinical presentation and the most effective treatment options for patients with hair growth disorders

The Stationery Office Annual Catalogue 2000 2002 drug addiction may be viewed as a form of learning during which strong associations linking actions to drug seeking are expressed as persistent stimulus response habits thereby maintaining a vulnerability to relapse disrupting cue drug memory could be an efficient strategy to reduce the strength of cues in motivating drug taking behavior upon reactivation these memories undergo a reconsolidation process that can be blocked pharmacologically providing an opportunity to prevent the powerful control of drug cues on behavior this conceptually elegant approach still calls for more experimental data however an increasing body of evidence suggests that drug taking not only accelerates habit forming but has long lasting effects on interactions between memory systems eventually leading to a functional imbalance the dorsal part of the striatum plays a critical role in habit procedural learning whereas the hippocampal memory system encodes relationships between events and their later flexible use both humans and rodents studies support the view that the hippocampus and the dorsal striatum interact in either a cooperative or competitive manner during learning the prefrontal cortex being involved in the selection of an appropriate learning strategy chronic drug consumption biases normal interactions between these memory systems for instance drug experienced rodents tend to use preferentially striatum dependent learning strategies in navigational tasks these persistent effects seem to occur at cellular neurophysiological and behavioral levels to promote specific striatal dependent forms of learning to the detriment of spatial declarative hippocampal dependent and more flexible types of memory whether cue sensitive and response learners in contrast to spatial learners could be prone to drug addiction is an intriguing hypothesis which clearly deserves to be further explored a loss of flexibility may be uncovered also by imposing changing rules on the subject such as requiring an attentional shift between different perceptual features of a complex stimulus as in the attentional set shifting task which was recently adapted to rodents working memory is at risk during transition phases although it remains to be determined whether withdrawal induced alterations are observed also during protracted abstinence drug induced cognitive biases thus lead to cognitive rigidity which could play a critical yet overlooked role in different phases of addiction acquisition extinction withdrawal and relapse they are also likely to preclude the clinical efficiency of treatments therefore the aim of this research topic is to provide an overview of the current work investigating the long term impact of drug use on learning and memory processes how multiple memory systems modulate drug seeking behavior as well as how drug induced cognitive biases could contribute to the persistence of addictive behaviors

Session DeyS vol.1 2023-05-27 this third volume in the series hyperthermia and oncology provides insight in and updated information on various aspects of interstitial hyperthermia it aims to serve as a guide for clinicians who are either already working in the field or who wish to implement this treatment
