dyslexia researchers roderick nicolson and angela fawcett provide a uniquely broad and coherent analysis of dyslexia theory unlike most dyslexia research which addresses the question what is the cause of the reading disability called dyslexia the authors work has addressed the deeper question of what is the cause of the learning disability that manifests as reading problems this perspective allows them to place dyslexia research within the much broader disciplines of cognitive psychology and cognitive neuroscience and has led to a rich framework including two established leading theories the automatization deficit account 1990 and the cerebellar deficit hypothesis 2001 nicolson and fawcett show that extensive evidence has accumulated to support these two theories and that they may be seen as subsuming the established phonological deficit account and sensory processing accounts moving to the explanatory level of neural systems they argue that all these disorders reflect problems in some component of the procedural learning system a multiregion system including major components of cortical and subcortical regions the authors answer to the fundamental question what is dyslexia offers a challenge and motivation for research throughout the learning disabilities laying the foundations for future progress lecturers request your electronic inspection copy here do you want to improve your study skills packed full of advice on topics including note taking essay writing reading strategies and exam techniques study skills for students with dyslexia is an essential read for students with dyslexia and other specific learning differences splds in further and higher education the guidance and tools provided help you organise and plan your work improve your skills and boost your confidence so you succeed throughout your studies the new edition contains a new chapter on critical thinking giving you confidence in analysing information and expressing an argument a new chapter on how to make the most of lectures to ensure you re maximising your learning opportunities the latest it and software references including links to online assistive technologies a toolkit of downloadable resources to help you plan and study with ease including templates planners tasks and activities and toolsheets this edition also comes with a fully editable digital download of the book so you can access it in your preferred reading format practical and interactive this book motivates inspires and guides you through all your studies sage study skills are essential study guides for students of all levels from how to write great essays and succeeding at university to writing your undergraduate dissertation and doing postgraduate research sage study skills help you get the best from your time at university visit the sage study skills hub for tips resources and videos on study success according to international educational statistics 2008 there are total of 654 9 million school age children in the world if dyslexia affects 10 15 of these youth fletcher et al 2007 this translates to approximately 65 98 million students with difficulties in reading and writing the eu strategic plan for education 2010 recognises the need for eu citizens to speak a foreign language as such foreign language courses are introduced on an obligatory basis at the primary level of education dyslexic students are not exempt from this regulation and thus are confronted with different language systems that must be mastered the difficulty here escalates if the systems differ significantly in their levels of orthographic transparency reading and writing are operationalised by the same biological functions that are defined by the universal perspective however language systems differ in terms of their transparency for example english and french are considered opaque scripts whereas spanish and italian are described as transparent orthographies these differences are discussed in this book as part of the language specific perspective which can in turn raise questions such as is a dyslexic student equally impaired in any language they study and is the type of difficulty primarily dependent on the language system or is it rather a dyslexia syndrome this volume provides answers through a synthesis of

Dyslexia, Learning, and the Brain

2010-08-13

a unique overview of research on dyslexia and an account of the underlying causes at cognitive brain and neural system levels that provides a framework for significant progress in the understanding of dyslexia and other related learning disabilities dyslexia research has made dramatic progress since the mid 1980s once discounted as a middle class myth

dyslexia is now the subject of a complex and confusing body of theoretical and empirical research in dyslexia learning and the brain leading dyslexia researchers roderick nicolson and angela fawcett provide a uniquely broad and coherent analysis of dyslexia theory unlike most dyslexia research which addresses the question what is the cause of the reading disability called dyslexia the authors work has addressed the deeper question of what is the cause of the learning disability that manifests as reading problems this perspective allows them to place dyslexia research within the much broader disciplines of cognitive psychology and cognitive neuroscience and has led to a rich framework including two established leading theories the automatization deficit account 1990 and the cerebellar deficit hypothesis 2001 nicolson and fawcett show that extensive evidence has accumulated to support these two theories and that they may be seen as subsuming the established phonological deficit account and sensory processing accounts moving to the explanatory level of neural systems they argue that all these disorders reflect problems in some component of the procedural learning system a multiregion system including major components of cortical and subcortical regions the authors answer to the fundamental question what is dyslexia offers a challenge and motivation for research throughout the learning disabilities laying the foundations for future progress
