limp materials are used in many economically impo tant industries such as garment manufacture shoe manufacture aerospace composites and automobiles seats and trim the use of sensors is essential for reliable robotic handling of these materials which are often based on naturally occurring substances such as cotton and leather the materials are limp and have non homogeneous mechanical properties which are often impossible to predict accurately the applications are very demanding for vision and tactile sensing and signal processing adaptive control systems planning and systems integration this book comprises the collection of papers presented at the nato advanced research workshop on sensory robotics for the handling of limp materials held in october 1988 at ii ciocco tuscanly italy the aim of the workshop was to examine the state of the art and determine what research is needed to provide the theoretical and technological tools for the successful application of sensory robotics to the handling of limp materials the meeting also acted as the first ever forum for the interchange of knowledge between applications driven researchers and those researching into the provision of fundamental tools the participants were drawn from academia 20 industry 5 and other non university research organisations 5

osha publication 2236 materials handling and storing discusses the handling and storing of materials in the workplace handling and storing materials involve diverse operations such as hoisting tons of steel with a crane driving a truck loaded with concrete blocks carrying bags or materials manually and stacking palletized bricks or other materials such as drums barrels kegs and lumber the efficient handling and storing of materials are vital to industry in addition to raw materials these operations provide a continuous flow of parts and assemblies through the workplace and ensure that materials are available when needed unfortunately the improper handling and storing of materials often result in costly injuries in addition to training and education applying general safety principles such as proper work practices equipment and controls can help reduce workplace accidents involving the moving handling and storing of materials whether moving material manually or mechanically your employees should know and understand the potential hazards associated with the task at hand and how to control their workplaces to minimize the danger because numerous injuries can result from improperly handling and storing materials workers should also be aware of accidents that may result from the unsafe or improper handling of equipment as well as from improper work practices in addition workers should be able to recognize the method for eliminating or at least minimizing the occurrence of such accidents employers and employees should examine their workplaces to detect any unsafe or unhealthful conditions practices or equipment and take corrective action
