Corona Phenomenon: Philosophical and Political Questions

2022-08-01

the question of unintelligibility does not arise with regard to books of fiction such as the stories and novels irrespective of how they are written even if a story is not understood there is no great harm done the problem is with the theoretical essays even there there is no problem with the essays related to the natural science if the language is simple the real problem is with the books of philosophy when we find the word philosophy on the face of the book we feel that this book is meant for the scholars not for us the very word philosophy at the outset will scare us immensely when we read the word philosophy on the face of a book it does not mean that it represents a great truth or a great science the contents of the book could be correct or useless or a blend of both the logic of the book will be in accordance with the philosophy of the book a correct one will have a correct logic a wrong one will have a wrong logic and a vacillating one will have a vacillating logic

this book attempts to advance donald griffin s vision of the final crowning chapter of the darwinian revolution by developing a philosophy for the science of animal consciousness it advocates a darwinian bottom up approach that treats consciousness as a complex evolved and multidimensional phenomenon in nature rather than a mysterious all or nothing property immune to the tools of science and restricted to a single species the so called emergence of a science of consciousness in the 1990s has at best been a science of human consciousness this book aims to advance a true darwinian science of consciousness in which its evolutionary origin function and phylogenetic diversity are moved from the field s periphery to its very centre thus enabling us to integrate consciousness into an evolutionary view of life accordingly this book has two objectives i to argue for the need and possibility of an evolutionary bottom up approach that addresses the problem of consciousness in terms of the evolutionary origins of a new ecological lifestyle that made consciousness worth having and ii to articulate a thesis and beginnings of a theory of the place of consciousness as a complex evolved phenomenon in nature that can help us to answer the question of what it is like to be a bat an octopus or a crow a philosophy for the science of animal consciousness will appeal to researchers and advanced students interested in advancing our

understanding of animal minds as well as anyone with a keen interest in how we can develop a science of animal consciousness
