while the question is faith reasonable has continually occupied philosophers and theologians little attention has been paid to what faith itself is the act of faith remedies this neglect by looking at what it means for a person of christian faith to believe eric springsted contrasts modern views of faith with the christian tradition running from augustine through aquinas and calvin in reviewing such thinkers as locke and hume springsted discovers that behind modern discussions of the reasonableness of faith lie key assumptions about the human self including the views that the good is a matter of choice and that we can exercise objective uninvolved reason according to springsted however the church has not viewed faith in this way his survey of the augustinian tradition shows that the self our most esteemed christian thinkers had in mind when talking about faith was a moral self one defined by character and self involvement christian faith is at root a participation in the good and reasoning within faith is reasoning within the life of god drawing on contemporary philosophers and theologians like john henry newman and simone weil springsted builds a fresh understanding of faith for today he shows how the

inner act of faith is ultimately a radical willingness to be open to god and he argues that the faithful self is one that develops within a community that shapes its members through the morally formative activities of interaction teaching and sacramental practice

justification as ignorance offers an original account of epistemic justification as both non factive and luminous vindicating core internalist intuitions without construing justification as an internal condition knowable by reflection alone sven rosenkranz conceives of justification in its doxastic and propositional varieties as a kind of epistemic possibility of knowing and of being in a position to know his account contrasts with recent alternative views that characterize justification in terms of the metaphysical possibility of knowing instead he develops a suitable non normal multi modal epistemic logic for knowledge and being in a position to know that respects the finding that these notions create hyperintensional contexts he also defends his conception of justification against well known anti luminosity arguments shows that the account allows for fruitful applications and principled solutions to the lottery and preface paradoxes and provides a metaphysics of justification and its varying degrees of strength that is compatible with core assumptions of the knowledge first approach and disjunctivist conceptions of mental states

james van cleve here shows why thomas reid 1710 96 deserves a place alongside the other canonical figures of modern philosophy he expounds reid s positions and arguments on a wide range of topics taking interpretive stands on points where his meaning is disputed and assessing the value of his contributions to issues philosophers are discussing today among the topics van cleve explores are reid s account of perception and its

relation to sensation conception and belief his nativist account of the origin of the concepts of space and power his attempt to clear the way for the belief that the things we directly perceive are external things not ideas in our minds his stand on the distinction between primary and secondary qualities his account of acquired perception whereby we come to stand in a quasi perceptual relation to qualities not originally perceived his claim that visual space is non euclidean his answers to the questions why we see the world right side up with inverted retinal images and whether a newly sighted person would recognize by sight the shapes he previously knew by touch whether memory like perception is a form of direct awareness and how we manage to conceive of things that are utterly nonexistent also examined are reid s account of human knowledge by means of first principles his externalist reply to philosophical skepticism his volitional theory of action his use of the distinction between event causation and agent causation to understand freedom of the will and his criticism of hume and anticipation of moore on the analysis of moral judgment the most comprehensive work on reid in a quarter century this book will be welcomed by students of early modern philosophy epistemology the philosophy of perception and the philosophy of action

Filling a gap in project management literature, *Managing Public Sector Projects: A Strategic Framework for Success* in an era of downsized government supplies managers and administrators at all levels of government with expert guidance on all aspects of public sector project management from properly allocating risks in drafting contracts to dealing with downsized staffs and privatized services. This book clearly explains the technical concepts and the political issues involved in line with the principles of Total Quality Management (TQM) and the PMBOK Guide. David S. Kassel establishes a framework those in the public sector can follow to ensure the success of their public projects and programs. He supplies more than 30 real-life examples to illustrate the concepts behind the framework, including reconstruction projects in Iraq, the Big Dig project in Boston local sewer system, and library construction projects and software technology. This authoritative resource provides strategic recommendations for effective planning, execution, and maintenance of public projects. It also highlights the differences between managing projects in the public sector versus the private sector, explains how to scrutinize costs, performance, claims, and the backgrounds of prospective contractors, presents key safeguards that should be included in all contracts with contractors, consultants, suppliers, and other service providers, details the basics of project cost estimation, design, and scheduling, and how to hold contractors responsible for meeting established project standards in an age of downsized government and in the face of a general distrust of public service. This book is a dependable guide for avoiding management practices that are common to projects that fail and for adopting the practices common to projects that succeed in terms of cost, schedule, and quality.
