India has achieved self-sufficiency in food grain production in recent years with record production of 250 mt during 2011-12. However, the pulses production remained low and considered to be the major concern for researchers and development planners considering the much more importance in near future and to avoid pulses crisis situation the present attempt was made to compile the available scientific information so as to highlight the issues, technologies and strategies in the title of solving pulses crisis in India. The publication is divided into two parts. The first part deals with national issues, technologies and strategies while the second part deals with crop-based issues and technologies. The first part consists of 13 chapters. The first three chapters deal with pulses-related national issues, technologies and strategies including the region too. The fourth deals with crop diversification involving pulses while the fifth is focused on pulses production under organic system. The issues related to legumes as a nutrient supplement in sixth, tillage and crop establishment in seventh, water management in eighth and integrated nutrient management in ninth are discussed in detail. The aspects of weed and pest management are presented in tenth to eleventh respectively. The specific issues related to post-harvest value addition are discussed in twelfth while trade-related policy issues are focused in thirteenth. In part second, the crop issues, strategies and technologies are presented accordingly. Chapter fourteenth deals with pigeonpea while in chapter fifteenth issues related to greengram and black gram are discussed. Chapters sixteenth to nineteenth deal with chickpea, lentil, field pea and lathyrus while in chapter twentieth the issues, technologies and prospects of guar are discussed. In chapter twenty-first the issues and technologies related to arid legumes, mothbean, cowpea and horsegram with special reference to arid areas are discussed. Hopefully, the publication will prove to be a reference and a way forward for solving pulses crisis in India and achieving the targets matching with food production strategies in years to come.

Pulses for Food and Nutritional Security of India

2022-01-31

India, a country with high concentrations of poor and malnourished people, long promoted a cereal-centric diet composed of subsidized staple commodities such as rice and wheat to feed its population of more than a billion. Today, however, dietary patterns are changing. Policy makers, researchers, and health activists are looking for ways to fight hunger and malnutrition in the country as they shift their focus from calorie intake to nutrition. Neglected foods such as pulses, the dried edible seeds of legumes, are gaining attention. Pulses for nutrition in India: changing patterns from farm to fork explores the numerous benefits of a diet that incorporates pulses. Pulses, including pigeonpeas, lentils, and chickpeas, are less expensive than meat and are excellent sources of protein. In India, people consume pulses and other legumes for protein intake. Pulses also benefit the ecosystem among protein-rich foods. Pulses have the lowest carbon and water footprints. Pulses also improve soil health by naturally balancing atmospheric nitrogen in the soil, thus growing pulses reduces the need for nitrogenous fertilizer. Pulses for nutrition in India: changing patterns from farm to fork looks at the country's pulses sector in light of agricultural systems, climate change, irrigation design, and how policies, including the Green Revolution, have evolved over time to understand how pulses can help fulfill the objectives of India's food policies. Experts explore the role that pulse production plays in global trade, the changing demand for pulses in India since the 1960s, the possibility of improving pulse yields with better technology to compete with cereals, and the long-term health benefits of greater reliance on pulses. The analyses in Pulses for nutrition in India: changing patterns from farm to fork contribute to the emerging literature on pulses and will aid policy makers in finding ways to feed and nourish a growing population.

The pulse sector in Myanmar has emerged as a crucial income source for farmers during the triple crisis driven by increased export demand and domestic consumption as well as reduced production costs and irrigation requirements. However, pulse growers still face several challenges, including escalating fertilizer prices, conflict, border closures, and inadequate government support in terms of credit and extension services. This working paper focuses on assessing the performance and competitiveness of the pulse sector during the pre-post monsoon growing seasons of 2021 and 2022. The analysis is based on recall data obtained from the Myanmar Agricultural Performance Survey Maps conducted between August 2022 and September 2022.

the paper attempts to fill a knowledge gap by examining india s pulse complex consisting of production consumption and trade policies india s pulse policies are anchored in a cereal centric farming system and prioritize national self sufficiency as well as the mitigation of relative price increases in food on the farmer side government policy includes price support a minimum support price msp for different pulses initially without procurement but later backed by public procurement the msp plus procurement elicited a comparatively high supply response without procurement the msp worked only to anchor prices and benefit traders at the farmers expense by not accounting for the needed risk premium for a supply response the msp kept domestic production low even as the world s largest importer of pulses the scale of pulse imports in india have generally not been large enough to cool its markets and bring down domestic prices instantaneous supply adjustments by exporters in response to trade policy changes are difficult
