conflicts in western societies have been on the rise and not just since the financial crisis of 2008 this is generally explained in economic terms with growing disparities in wealth and income the left should benefit from this with its redistribution philosophy however the right is on the upswing even though its neoliberalism is fueling social conflicts how is that behind the economic tensions lies a deep crisis of meaning the right is exploiting this by offering simplistic set pieces of meaning with success because people strive for nothing so much as meaning in their own lives the example of the usa shows how neoliberalism destroys people and societies possible solutions also come from there

while international negotiations to reduce greenhouse gas ghg emissions have been less than satisfactory there is a presumption that a significant level of multi lateral commitment will be realized at some point international air and marine travel have been left to one side in past talks because the pursuit of agreement proceeds on the basis of commitment by sovereign nations and the effects of these specific commercial activities are by their nature difficult to corral and assign to specific national jurisdictions however air travel is increasing and unless something is done emissions from this segment of our world economy will form a progressively larger percentage of the total especially as emissions fall in other activities this book focuses on fuel the aim is to provide background in technical and policy terms from the broadest reliable sources of information available for the necessary discourse on society s reaction to the evolving aviation emissions profile it considers what

policy has been why and how commercial air travel is committed to its current liquid fuel how that fuel can be made without using fossil source materials and the barriers to change it also advances some elements of policy remedies that make sense in providing an environmentally and economically sound way forward in a context that comprehends a more complete vision of sustainability than renewable fuels traditionally have the goal of will sustainability fly is to broaden and contextualize the knowledge resource available to academics policy makers air industry leaders and stakeholders and interested members of the public
