Interdisciplinary Perspectives on the New Immigration: The new immigrant in American society 2001

teaching and learning at a distance is written for introductory distance education courses for
preservice or in service teachers and for training programs that discuss teaching distant
learners or managing distance education systems this text provides readers with the basic
information needed to be knowledgeable distance educators and leaders of distance education
programs the teacher or trainer who uses this book will be able to design courses evaluate
programs and identify issues and trends affecting the field in this text we take the following
themes the first theme is the definition of distance education before we started writing the
first edition of teaching and learning at a distance we carefully reviewed the literature to
determine the definition that would be at the foundation of our writing this definition is based
on the work of desmond keegan but is unique to this book and has been adopted by the association
for educational communications and technology and by the encyclopedia britannica the second theme
of the book is the importance of research to the development of effective courses and programs
offered at a distance the best practices presented in teaching and learning at a distance are
validated by scientific evidence certainly there are rules of thumb but we have always attempted
to only include recommendations that can be supported by research the third theme of teaching and
learning at a distance is derived from richard clark s famous quote published in the review of
educational research asserting that media are mere vehicles that do not directly influence
achievement clark s controversial work is discussed in the book but is also fundamental to the
book s advocacy for distance education in other words we authors do not make the claim that
education delivered at a distance is inherently better than other ways people learn distance
delivered instruction is not a magical approach that makes learners achieve more equivalency
theory is the fourth theme of the book here we present the concept that instruction should be
provided to learners that is equivalent rather than identical to what might be delivered in a
traditional environment equivalency theory helps the instructional designer approach the
development of instruction for each learner without attempting to duplicate what happens in a
face to face classroom the final theme for teaching and learning at a distance is the idea that
the book should be comprehensive that it should cover as much of the various ways instruction is
made available to distant learners as is possible it can serve as a stand alone source of
information
