Design and Analysis of Integrated Manufacturing Systems

1988-02-01

design and analysis of integrated manufacturing systems is a fresh look at manufacturing from a systems point of view this collection of papers from a symposium sponsored by the national academy of engineering explores the need for new technologies the more effective use of new tools of analysis and the improved integration of all elements of manufacturing operations including machines information and humans it is one of the few volumes to include detailed proposals for research that match the needs of industry

Modeling and Analysis with Induction Generators, Third Edition

2014-12-11

now in its third edition alternative energy systems design and analysis with induction generators has been renamed modeling and analysis with induction generators to convey the book's primary objective to present the fundamentals of and latest advances in the modeling and analysis of induction generators new to the third edition revised equations and mathematical modeling addition of solved problems as well as suggested problems at the end of each chapter new modeling and simulation cases mathematical modeling of the magnus turbine to be used with induction generators detailed comparison between the induction generators and their competitors modeling and analysis with induction generators third edition aids in understanding the process of self excitation numerical analysis of stand alone and multiple induction generators requirements for optimized laboratory experimentation application of modern vector control optimization of power transference use of doubly fed induction generators computer based simulations and social and economic impacts

this book with a focus on english and polish is a study of surveying terminology which may be considered as an under researched area when compared to legal medical or business terminologies it examines differences between terms and concepts in the two languages the purpose of the book is three fold firstly to investigate how surveying terms are created and how they are named in english and polish secondly to analyse concept systems of the two languages with respect to surveying terminology and thirdly to indicate the areas of surveying in which terminological and conceptual differences occur the factors that trigger them and translation strategies which are used to solve them the book offers a systematic corpus based approach to terminology data for analyses come from the english and polish surveying corpora compiled specifically for this project the author of the book attempts to provide a wide picture of surveying terminology by looking at problems that diversified groups of users may identify the book is directed towards terminologists and lexicographers for whom it provides a set of guidelines on how to enrich the content of surveying dictionaries translators and technical writers who may find information on how to deal with conceptual mismatches and to specialists in the surveying field who are interested in finding equivalents for problematic terms

the use of computer based image analysis systems for all kinds of images but especially for microscope images has become increasingly widespread in recent years as computer power has increased and costs have dropped software to perform each of the various tasks described in this book exists now and without doubt additional algorithms to accomplish these same things more efficiently and to perform new kinds of image processing feature discrimination and measurement will continue to be developed this is likely to be true particularly in the field of three dimensional imaging since new microscopy methods are beginning to be used which can produce such data it is not the intent of this book to train programmers who will assemble their own computer systems and write their own programs most users require only the barest of knowledge about how to use the computer but the greater their understanding of the various image analysis operations which are possible their advantages and limitations the greater the likelihood of success in their application likewise the book assumes little in the way of a mathematical background but the researcher with a secure knowledge of appropriate statistical tests will find it easier to put some of these methods into real use and have confidence in the results than one who has less background and experience supplementary texts and courses in statistics microscopy and specimen preparation are recommended as necessary
