Advanced Cost Accounting & Cost System 2023-08-01 inhaltsangabe introduction 1 1 approach and motivation world transportation overcomes the distance between places of origin and places of demand for both passengers and freight

almost three guarters of the world's surface is covered by water and around 80 percent of the world trade by weight is moved in this mode offshore trade activities confined to container trade describe a synonym that features globalization in fact transportation including these activities is the least visible critical element in world economies but the importance of environment has barely been discussed in the context of pollution performance from individual economies as a consequence trade lane confined to specific world sea shipping routes between individual ports emissions generated by economies are not precisely reviewed by government agencies in addition the real amount and costs of atmospheric pollutions linked to offshore trade lane performance are not entirely understood by consumers environmental awareness seems to be seldom raised in our society in fact the ignorance of mankind is the most important factor due to since appropriate information is very little available some emissions are contributing to a process of retaining the heat from solar radiation by the planet earth also referred to as greenhouse effect the greenhouse effect which originally has a positive effect because it makes the planet earth warm enough to sustain life is responsible for the increase of the global temperature which has quite apparent effects on our world melting sea ice effects and rising seawater levels are only a few examples to be precise freight transportation is responsible for approximately 25 percent of the total global transport emissions equal to 1 65 billion tonnes of co2 per year with increasing global demand in commodities and goods the magnitude of transportation also rises essentially addressing the consumer s and industry s need of delivering shipments with different sizes volumes weight and requirements at the right place to the right time in the right quantity and to the right costs from what has been said earlier it is curious why no generally accepted criterion to allocate international transportation pollution is currently in use while diffident efforts were made to include these emissions in international conventions co2 emissions related to international freight are not involved in the pollution

An Explorative Freeway Cost Earnings Study 1970 this book

contains the papers that were presented in 1994 at the conference transaction cost economics and beyond organized by grasp at the tinbergen institute in rotterdam it is generally recognized that transaction cost economics tce is at the heart of the new theory of the firm it is a well established research program with a well developed theoretical framework and good results in empirical testing however critics consider the approach too limited to understand the essential characteristics of such complex organizations like firms critics plea convincingly for the need to go beyond the original tce framework and to develop a more pluralistic approach towards issues of economic organization the new theory of the firm can only be further developed when scholars are willing to debate the issues in an open minded academic way i thank the participants of the conference very much for putting so much effort in writing their papers and for their contribution to an open and stimulating discussion it is my wish that this book contributes to the further deve lopment of the theory of the firm and that it helps us to a better
