Advances in Meta-Analysis

the subject of the book is advanced statistical analyses for quantitative research synthesis meta analysis and selected practical issues relating to research synthesis that are not covered in detail in the many existing introductory books on research synthesis or meta analysis complex statistical issues are arising more frequently as the primary research that is summarized in quantitative syntheses itself becomes more complex and as researchers who are conducting meta analyses become more ambitious in the questions they wish to address also as researchers have gained more experience in conducting research syntheses several key issues have persisted and now appear fundamental to the enterprise of summarizing research specifically the book describes multivariate analyses for several indices commonly used in meta analysis e q correlations effect sizes proportions and or odds ratios will outline how to do power analysis for meta analysis again for each of the different kinds of study outcome indices and examines issues around research quality and research design and their roles in synthesis for each of the statistical topics we will examine the different possible statistical models i e fixed random and mixed models that could be adopted by a researcher in dealing with the issues of study quality and research design it covers a number of specific topics that are of broad concern to research synthesists in many fields a current issue is how to make sense of results when studies using several different designs appear in a research literature e g morris deshon 1997 2002 in education and other social sciences a critical aspect of this issue is how one might incorporate qualitative e g case study research within a synthesis in medicine related issues concern whether and how to summarize observational studies and whether they should be combined with randomized controlled trials or even if they should be combined at all for each topic included is a worked example e g for the statistical analyses and or a detailed description of a published research synthesis that deals with the practical non statistical issues covered
