since 1988 the state of working america has provided a comprehensive answer to a question newly in vogue in this age of occupy wall street to what extent has overall economic growth translated into rising living standards for the vast majority of american workers and their families in the 12th edition lawrence mishel josh bivens elise gould and heidi shierholz analyze a trove of data on income jobs mobility poverty wages and wealth to demonstrate that rising economic inequality over the past three decades has decoupled overall economic growth from growth in the living standards of the vast majority the new edition of the state of working america also expands on this analysis of american living standards most notably by placing the great recession in historical context the severe economic downturn that began in december 2007 came on the heels of a historically weak recovery following the 2001 recession a recovery that saw many measures of living standards stagnate the authors view the past decade as lost in terms of living standards growth and warn that millions of american households face another decade of lost opportunity especially troubling the authors stress

is that while overall economic performance in the decades before the great recession was more than sufficient to broadly raise living standards broad based growth was blocked by rising inequality driven largely by policy choices a determinedly data driven narrative the state of working america remains the most comprehensive resource about the economic experience of working americans

the 12th winter workshop on nuclear dynamics carried on the tradition started in 1978 of bringing together scientists working in all regimes of nuclear dynamics this broad range of related topics allows the researcher attending the workshop to be exposed to work that normally would be considered outside his her field but could potentially add a new dimension to the understanding of his her work at snowbird we brought together experimentalists working with heavy ion beams from 10 mev nucleon up to 200 gev nucleon and theoretical physicists working in diverse areas ranging from antisymmetrized fermionic dynamics to perturbative quantum chromo dynamics fu ture work at rhic was discussed also with presentations from several of the experimen tal groups in addition several talks addressed issues of cross disciplinary relevance from the

study of water drop collisions to the multi fragmentation of buckyballs clearly the field of nuclear dynamics has a bright future the understanding of the nuclear equation of state in all of its manifestations is being expanded on all fronts both theoretically and experimentally future workshops on nuclear dynamics will certainly have much progress to report gary d westfall wolfgang bauer michigan state university v previous workshops the following table contains a list of the dates and locations of the previous winter workshops on nuclear dynamics as well as the members of the organizing committees the chairpersons of the conferences are underlined
