the european symposium on computer aided process engineering escape series presents the latest innovations and achievements of leading professionals from the industrial and academic communities the escape series serves as a forum for engineers scientists researchers managers and students to present and discuss progress being made in the area of computer aided process engineering cape european industries large and small are bringing innovations into our lives whether in the form of new technologies to address environmental problems new products to make our homes more comfortable and energy efficient or new therapies to improve the health and well being of european citizens moreover the european industry needs to undertake research and technological initiatives in response to humanity s grand challenges described in the declaration of lund namely global warming tightening supplies of energy water and food ageing societies public health pandemics and security thus the technical theme of escape 21 will be process systems approaches for addressing grand challenges in energy environment health bioprocessing nanotechnologies

this handbook brings together under a single cover all aspects of the chemistry physics and engineering of surfaces and interfaces of materials currently studied in academic and industrial research it covers different experimental and theoretical aspects of surfaces and interfaces their physical properties and spectroscopic techniques that have been applied to a wide class of inorganic organic polymer and biological materials the diversified technological areas of surface science reflect the explosion of scientific information on surfaces and interfaces of materials and their spectroscopic characterization the large volume of experimental

data on chemistry physics and engineering aspects of materials surfaces and interfaces remains scattered in so many different periodicals therefore this handbook compilation is needed the information presented in this multivolume reference draws on two decades of pioneering research on the surfaces and interfaces of materials to offer a complete perspective on the topic these five volumes surface and interface phenomena surface characterization and properties nanostructures micelles and colloids thin films and layers biointerfaces and applications provide multidisciplinary review chapters and summarize the current status of the field covering important scientific and technological developments made over past decades in surfaces and interfaces of materials and spectroscopic techniques with contributions from internationally recognized experts from all over the world fully cross referenced this book has clear precise and wide appeal as an essential reference source long due for the scientific community the complete reference on the topic of surfaces and interfaces of materialsthe information presented in this multivolume reference draws on two decades of pioneering researchprovides multidisciplinary review chapters and summarizes the current status of the fieldcovers important scientific and technological developments made over past decades in surfaces and interfaces of materials and spectroscopic techniquescontributions from internationally recognized experts from all over the world
