## 1993

this book discusses the expertise skills and techniques needed for the development of new materials and technologies it focuses on finite element and finite volume methods that are used for engineering simulations and present many state of the art applications and advances to highlight these methods importance for example modern joining technologies can be used to fabricate new compound or composite materials even those formed from dissimilar component materials these composite materials are often exposed to harsh environments must deliver specific characteristics and are primarily used in automotive and marine technologies i e ships amphibious vehicles docks offshore structures and even robots to achieve the desired material performance computer based engineering tools are widely used for simulation data evaluation and design processes
