**Popular Science** 2014-03-27 this innovative volume focuses on tourism through the twin lenses of cultural theory and cultural geography presenting a set of innovative case studies on tourist destinations around the world the contributors explore the paradoxes of the tourist experience and the implications of these paradoxes for our broader understanding of the problems of modernity and identity the book examines how tourism reveals the paradoxical ways that places are both

mobile and rooted real and fake inhabited by those who are simultaneously insiders and outsiders and both subjectively experienced and objectively viewed the concepts of travel and mobility long have been used to explain modern identity and social behavior but this work pushes beyond the established literature by considering the ways that place and mobility are inherently related in unexpected even contradictory ways travel the international cast of authors contends occurs in place rather than between places thus instead of offering yet another interpretation of the ways modern societies are distinguished by their mobilities in contrast to the supposed place bound quality of traditional societies the chapters here collectively argue for an understanding of modern identity as simultaneously grounded and mobile this rich blend of empirical and theoretical analysis will be invaluable for cultural geographers anthropologists and sociologists of tourism
