## GWF; Das Gas- und Wasserfach

1895

this is the first textbook that contains a holistic treatment of antennas both for traditional antennas mounted on masts line of sight antenna systems and for small antennas used on modern wireless devices such as smart phones being subject to signal variations fading due to multipath propagation the focus is on characterization as well as describing classical antennas by modern complex vector theory thereby linking together many disciplines such as electromagnetic theory classical antenna theory wave propagation and antenna system performance overall this book represents a rethinking of the way basic antenna theory is presented the book contains many references to important old and new papers and books on the analysis and design of the most useful antenna types for the most interested readers

world scientific work and technological progress now depend largely on questions of who owns what as do the success and profits of countless authors artists inventors researchers and industrialists economic legal and ethical issues play a central role in the increasingly complex balance between unilateral gains and universal benefits from the knowledge society economics law and intellectual property explores the field in both depth and breadth through the latest views of leading experts in europe and the united states it provides a fundamental understanding of the problems and potential solutions not only in doing practical business with ideas and innovations but also on the level of institutions that influence such business addressing a range of readers from individual scholars to company managers and policy makers it gives a unique perspective on current developments

valuable resource for all researchers in materials science particularly those specialising in electron microscopy and diffraction and in the mechanical properties of materials the front and back covers of this book are coloured images of historic electron micrographs depicting the first observation in the world of moving dislocations the pictures were taken by mike whelan then a research student of peter hirsch the image on the front cover is before some dislocations have moved and the back cover image is after the movement see if you can spot the difference this book had its genesis in a symposium organised by mike gorings john hutchison and myself to mark the retirement of peter hirsch from the isaac wolfson chair of metallurgy at oxford this symposium brought together a large number of peter s former students and colleagues some of the most distinguished of these have now written the chapters in this book the opening chapter by professor ugo valdre provides a fascinating biographical sketch of peter hirsch from his early career in cambridge to his retirement in oxford it contains many illuminating insights into the personality of peter both as a scientist and as a man the next two chapters focus on the development of electron microscopy and diffraction professor mike whelan gives an eye witness account of the seminal early work of peter and his colleagues at cambridge on the first observation of dislocations and their movements using transmission electron microscopy professor archie howie extends this account to the present day describing nanometer scale resolution in scanning electron microscopes and atomic scale resolution in the scanning tunnelling microscope
