erroneous or fallacious thought is the use of invalid or otherwise faulty reasoning or wrong moves in the construction of an argument or thought and reasoning process a fallacious argument may be deceptive by appearing to be better than it really is some fallacies are committed intentionally to manipulate or persuade by deception while others are committed unintentionally due to carelessness or ignorance as even lawyers admit that the extent to which an argument is sound or unsound depends on the context in which the argument is made fallacies are commonly divided into formal and informal a formal fallacy can be expressed neatly in a standard system of logic such as propositional logic while an informal fallacy originates in an error in reasoning other than an improper logical form arguments containing informal fallacies may be formally valid but still fallacious some other forms of fallacious reasoning are cognitive distortion emotional reasoning groupthink and magical thinking this book discusses and reveals the many ways in which we deceive ourselves through the use of a fallacious thought process

originally published in 1982 this was an extensive and up to date review of research into the psychology of deductive reasoning jonathan evans presents an alternative theoretical framework to the rationalist approach which had dominated much of the published work in this field at the time the review falls into three sections the first is concerned with elementary reasoning tasks in which response latency is the prime measure of interest the second and third sections are concerned with syllogistic and propositional reasoning respectively in which interest has focused on the explanation of frequently observed logical errors in an extended discussion it is argued that reasoning processes are content specific and give little indication of the operation of any underlying system of logical competence finally a dual process theory of reasoning with broad implications and connections with other fields of psychology is elaborated and assessed in the light of recent evidence
