polymers used in electronics and electrical engineering are essential to the development of high tech products with applications in space aviation health automotive communication robotics consumer products and beyond typical features of mainstream polymers such as mechanical performance optical behavior and environmental stability frequently need to be enhanced to perform in these demanding applications creating the need to develop special grades or use completely new chemistry for their synthesis similarly the typical set of properties included in the description of mainstream polymers are not sufficient for polymer selection for these applications as they require different data data that is meticulously detailed in the handbook of polymers for electronics the book provides readers with the most up to date information from the existing literature manufacturing data and patent filings presenting data for all polymers based on a consistent pattern of arrangement the book provides details organized into the following sections general history synthesis structure commercial polymers physical properties electrical properties mechanical properties chemical resistance flammability weather stability thermal stability biodegradation toxicity environmental impact processing blends analysis the contents scope treatment and novelty of the data makes this book an essential resource for anyone working with polymeric materials used in modern electronic applications synthesizes the most recent literature available on various grades of polymers plastics finished products and patents provides data on general information synthesis structure physical properties electrical properties mechanical properties chemical resistance flammability weather stability thermal stability biodegradation toxicity environmental impact and more details information on crystalline structure cell dimensions methods of synthesis optoelectrical properties relative permittivity dissipation factor actuation bandwidth tear strength abrasion resistance and more

the automobile sector is one of the most archetypal global industries and is seen by many as one of the main

drivers behind the homogenisation of world markets due to firms internationalization strategies and the social practices that firms impose this book argues that this is not entirely the case due to the heterogeneity of firms and the diversity of strategies pursued it highlights the diversity and forms of internationalization and the preference for regionalization rather than globalization that has occurred over the past decade this book looks specifically at the american and asian car industry

tormented by past heartbreak and contemporary politics for edgar lefty mendieta the news of the murder of lawyer bruno canizales represents just another day at the office in the drug ridden city of culiacán it soon becomes

clear that there is no shortage of suspects in a city where it s hard to tell the gangsters from the politicians canizales was the son of a former government minister and the partner of a drug baron s daughter with his own penchant for cross dressing and dangerous sex what is less clear is why the assassin chose to use a silver bullet and why two days later they seem to have struck again in this sweltering city where a desire for the truth can be as dangerous as any drug mendietta s search for justice takes him from mansions to drug dens in Élmer mendoza s seminal founding text of latin america s narco lit wave
