Financial Modeling, fourth edition 2014-04-18

large and persistent global financial imbalances need not be the harbinger of a world financial crash instead we show that these imbalances can be the outcome of financial integration when countries differ in financial markets deepness in particular countries with more advanced financial markets accumulate foreign liabilities in a gradual long lasting process differences in financial deepness also affect the composition of foreign portfolios countries with negative net foreign asset positions maintain positive net holdings of non diversifiable equity and fdi abstracting from the potential impact of globalization on financial development liberalization leads to sizable welfare gains for the more financially developed countries and losses for the others three empirical observations motivate our analysis 1 financial deepness varies widely even amongst industrial countries with the united states ranking at the top 2 the secular decline in the u s net foreign asset position started in the early 1980s together with a gradual process of international capital markets liberalization 3 net exports and current account balances are negatively correlated with indicators of financial development

Library of Congress Catalogs 1970

high public debt often produces the drama of default and restructuring but debt is also reduced through financial repression a tax on bondholders and savers via negative or belowmarket real interest rates after wwii capital controls and regulatory restrictions created a captive audience for government debt limiting tax base erosion financial repression is most successful in liquidating debt when accompanied by inflation for the advanced economies real interest rates were negative 1 2 of the time during 1945 1980 average annual interest expense savings for a 12 country sample range from about 1 to 5 percent of gdp for the full 1945 1980 period we suggest that once again financial repression may be part of the toolkit deployed to cope with the most recent surge in public debt in advanced economies

CIMA Strategic E3, F3 & P3 Integrated Case Study 2016-11-30

this book presents frontier research on the use of computational methods to model complex interactions in economics and finance artificial intelligence machine learning and simulations offer effective means of analyzing and learning from large as well as new types of data these computational tools have permeated various subfields of economics finance and also across different schools of economic thought through 16 chapters written by pioneers in economics finance computer science psychology complexity and statistics econometrics the book introduces their original research and presents the findings they have yielded theoretical and empirical studies featured in this book draw on a variety of approaches such as agent based modeling numerical simulations computable economics as well as employing tools from artificial intelligence and machine learning algorithms the use of computational approaches to perform counterfactual thought experiments are also introduced which help transcend the limits posed by traditional mathematical and statistical tools the book also includes discussions on methodology epistemology history and issues concerning prediction validation and inference all of which have become pertinent with the increasing use of computational approaches in economic analysis
