this book assesses the normative and practical challenges for artificial intelligence ai regulation offers comprehensive information on the laws that currently shape or restrict the design or use of ai

and develops policy recommendations for those areas in which regulation is most urgently needed by gathering contributions from scholars who are experts in their respective fields of legal research it demonstrates that ai regulation is not a specialized sub discipline but affects the entire legal system and thus concerns all lawyers machine learning based technology which lies at the heart of what is commonly referred to as ai is increasingly being employed to make policy and business decisions with broad social impacts and therefore runs the risk of causing wide scale damage at the same time ai technology is becoming more and more complex and difficult to understand making it harder to determine whether or not it is being used in accordance with the law in light of this situation even tech enthusiasts are calling for stricter regulation of ai legislators too are stepping in and have begun to pass ai laws including the prohibition of automated decision making systems in article 22 of the general data protection regulation the new york city ai transparency bill and the 2017 amendments to the german cartel act and german administrative procedure act while the belief that something needs to be done is widely shared there is far less clarity about what exactly can or should be done or what effective regulation might look like the book is divided into two major parts the first of which focuses on features common to most ai systems and explores how they relate to the legal framework for data driven technologies which already exists in the form of national and supra national constitutional law eu data protection and competition law and anti discrimination law in the second part the book examines in detail a number of relevant sectors in which ai is increasingly shaping decision making processes ranging from the notorious social media and the legal financial and healthcare industries to fields like law enforcement and tax law in which we can observe how regulation by ai is becoming a reality

Les voies de développement Examen multidimensionnel du Maroc (Volume 2) Analyse approfondie et recommandations

General catalogue of printed books

1931

the title of the book derives from the theme of the 20th conference on applied social sciences of the professional association of german sociologists held in munich in may 2019 the question of what concrete contributions social innovations can make to the transition to forms of sustainable coexistence and economic activity is as much the focus of this book as the question of what contribution the social sciences can make thus on the one hand it is about concrete social innovations that help us to achieve the goal of living and doing business sustainably but on the other hand it is also about the way in which the social sciences not least through appropriate theoretical and methodological training can be made socially responsible for the success of such socially innovative processes this book is a translation of an original german edition the translation was done with the help of artificial intelligence machine translation by the service deepl com a subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation
