## Question 1 **2006-09-19**

1. The diagram shows the production possibility frontiers for two countries, Australia and New Zealand. The vertical axis represents the quantity of wheat produced and the horizontal axis represents the quantity of sheep produced. Australia's production possibility frontier is a straight line connecting 100 units of wheat and 0 units of sheep. New Zealand's production possibility frontier is a straight line connecting 50 units of wheat and 100 units of sheep.

## Question 2 **2001-12**

1. The diagram shows the production possibility frontiers for two countries, Australia and New Zealand. The vertical axis represents the quantity of wheat produced and the horizontal axis represents the quantity of sheep produced. Australia's production possibility frontier is a straight line connecting 100 units of wheat and 0 units of sheep. New Zealand's production possibility frontier is a straight line connecting 50 units of wheat and 100 units of sheep.

## Question 3 **2009-04**

1. The diagram shows the production possibility frontiers for two countries, Australia and New Zealand. The vertical axis represents the quantity of wheat produced and the horizontal axis represents the quantity of sheep produced. Australia's production possibility frontier is a straight line connecting 100 units of wheat and 0 units of sheep. New Zealand's production possibility frontier is a straight line connecting 50 units of wheat and 100 units of sheep.

## Question 4 **1957**

1. The diagram shows the production possibility frontiers for two countries, Australia and New Zealand. The vertical axis represents the quantity of wheat produced and the horizontal axis represents the quantity of sheep produced. Australia's production possibility frontier is a straight line connecting 100 units of wheat and 0 units of sheep. New Zealand's production possibility frontier is a straight line connecting 50 units of wheat and 100 units of sheep.

**2004-04**

When the price of a good falls, the quantity demanded of that good increases. This is the law of demand. The demand curve shows the relationship between price and quantity demanded. It is downward sloping because as price falls, quantity demanded increases.

**1956-10-05**

The price of a good is determined by the interaction of supply and demand. When the price is above the equilibrium price, there is a surplus. When the price is below the equilibrium price, there is a shortage. The equilibrium price is the price at which the quantity demanded is equal to the quantity supplied.

**1999-12**

The price of a good is determined by the interaction of supply and demand. When the price is above the equilibrium price, there is a surplus. When the price is below the equilibrium price, there is a shortage. The equilibrium price is the price at which the quantity demanded is equal to the quantity supplied.

**1957-01-01**

The price of a good is determined by the interaction of supply and demand. When the price is above the equilibrium price, there is a surplus. When the price is below the equilibrium price, there is a shortage. The equilibrium price is the price at which the quantity demanded is equal to the quantity supplied.
