this book combines the research activities of the authors both of whom are researchers at école nationale de l'aviation civile french national school of civil aviation and presents their findings from the last 15 years their work uses air transport as its focal point within the realm of mathematical optimization looking at real life problems and theoretical models in tandem and the challenges that accompany studying both approaches the authors research is linked with the attempt to reduce air space congestion in western europe usa and increasingly asia they do this through studying stochastic optimization particularly artificial evolution the sectorization of airspace route distribution and takeoff slots and by modeling airspace congestion finally the authors discuss their short medium and long term research goals they hope that their work although related to air transport will be applied to other fields such is the transferable nature of mathematical optimization at the same time they intend to use other areas of research such as approximation and statistics to complement their continued inquiry in their own field contents 1 introduction part 1 optimization and artificial evolution 2 optimization state of the art 3 genetic algorithms and improvements 4 a new concept for genetic algorithms based on order statistics part 2 applications to air traffic control 5 air traffic control 6 contributions to airspace sectorization 7 contribution to traffic assignment 8 airspace congestion metrics 9 conclusion and future perspectives about the authors daniel delahaye works for école nationale de l'aviation civile french national school of civil aviation in france stéphane puechmorel works for école nationale de l'aviation civile french national school of civil aviation in france

theory of one parameter bifurcations for operators acting in infinite dimensional banach spaces and shows how to apply the theory to problems involving partial differential equations in addition to existence qualitative properties such as stability and nodal structure of bifurcating solutions are treated in depth this volume will serve as an important reference for mathematicians physicists and theoretically inclined engineers working in bifurcation theory and its applications to partial differential equations the second edition is substantially and formally revised and new material is added among this is bifurcation with a two dimensional kernel with applications the buckling of the euler rod the appearance of taylor vortices the singular limit process of the cahn hilliard model and an application of this method to more complicated nonconvex variational problems

mandela s kinsmen is the first study of the fraught relationships between the anc leadership and their relatives who ruled apartheid s foremost tribal bantustan the transkei in the early 20th century the chieftaincies had often been well springs of political leadership in the transkei political leaders such as mandela used regionally rooted clan schooling and professional connections to vault to leadership they crafted expansive nationalisms woven from these kin identities but from 1963 the apartheid government turned south africa s chieftaincies into self governing tribal bantustans in order to shatter

african nationalism while historians often suggest that apartheid changed everything african elites being eclipsed by an era of mass township and trade union protest and the chieftaincies co opted by the apartheid government there is another side to this story drawing on newly discovered accounts and archives gibbs reassesses the bantustans and the changing politics of chieftaincy showing how local dissent within transkei connected to wider political movements and ideologies emphasizing the importance of elite politics he describes how the anc in exile attempted to re enter south africa through the bantustans drawing on kin networks this failed in kwazulu but transkei provided vital support after a coup in 1987 and the alliances forged were important during the apartheid endgame finally in counterpoint to africanist debates that focus on how south african insurgencies narrowed nationalist thought and practice he maintains anc leaders calmed south africa s conflicts of the early 1990s by espousing an inclusive nationalism that incorporated local identities and that mandela s kinsmen still play a key role in state politics today timothy gibbs is a lecturer in african history university college london southern africa south africa namibia lesotho swaziland botswana jacana
