Feb 09 2024

regression analysis is a statistical method for modeling the relationship between a dependent variable and one or more independent variables. It is a type of regression analysis that assumes a linear relationship between the variables.

# wikipedia

Jan 08 2024

linear regression is a statistical method for modeling the relationship between a single dependent variable and one or more independent variables. It is a type of linear model that assumes a linear relationship between the variables. The model is represented by the equation  $y = \beta_0 + \beta_1 x + \epsilon$ , where  $y$  is the dependent variable,  $x$  is the independent variable,  $\beta_0$  is the intercept,  $\beta_1$  is the slope, and  $\epsilon$  is the error term. Linear regression is used to predict the value of the dependent variable based on the value of the independent variable. It is a widely used method in statistics and machine learning.

## IBM

Oct 05 2023

IBM is a multinational technology corporation that designs and manufactures a wide range of hardware, software, and consulting services for both institutional and commercial markets. The company is known for its mainframe computers, personal computers, and cloud computing services. IBM has a long history of innovation and is a leader in the technology industry.

## linear regression wikipedia

Sep 04 2023

Linear regression was the first type of regression analysis to be studied rigorously and to be used extensively in practical applications. This is because models which depend linearly on their unknown parameters are easier to fit than models which are non-linearly related to their parameters and because the statistical properties of

## keio

Aug 03 2023

Linear regression is a statistical method used to model the relationship between a dependent variable and one or more independent variables. It is a type of regression analysis that assumes a linear relationship between the variables. The method involves finding the best-fitting line through a set of data points, which can then be used to predict the value of the dependent variable for a given value of the independent variable.
