recent national estimates in just the us show that substance abuse and addiction alone cost taxpayers a total of nearly 500 billion a year in these volumes experts from around the world present the newest issues research and insights into addictions of all kinds led by angela browne miller director of the metaxis compulsive and habitual behaviors institute in california this team of contributors includes scholars and practitioners from the united states canada the united kingdom sweden thailand africa and russia topics range from drug addiction among male female teen and aging populations and among white hispanic black asian native american and other groups using liquor cocaine methamphetamine khat and or other lesser known drugs to behavioral addictions including online gaming excessive buying and eating disorders chapters also address issues including addiction as a public health problem and the politics of drug treatment policies treatment methods for addictions from electrotherapy to holistic approaches are addressed as are spiritual psychological and cross cultural issues involved the experts behind these chapters include those from the university of california berkeley johns hopkins school of medicine and purdue university to mcgill university nottingham trent university and the all india institute of medical sciences methamphetamine meth abuse has become a major public health problem world wide as demonstrated by increases in the number of emergency room visits substance abuse treatment episodes and arrests attributable to meth manufacture and abuse however there are currently no pharmacological treatments for the wide range of symptoms associated with meth abuse one of the reasons for this problem is that our knowledge of the cellular and molecular mechanisms underlying the development of meth induced psychosis and dependence is limited this book presents a review of the recent findings on meth abuse in humans first by describing the background and physiological effects of meth in humans next by discussing the clinical findings on meth abusers derived using brain imaging techniques single photon emission computed tomography spect positron emission tomography pet magnetic resonance spectroscopy mrs and functional magnetic resonance imaging fmri finally by reviewing the potential therapeutic approaches for the treatment of meth abusers presents the history and physical properties of methamphetamine physiological effects of the drug use among teens information about addiction and recovery and the legal ramifications of involvement with the drug once located in rural towns and on the west coast meth has erupted across the united states and is now devastating countless families children and neighborhoods inside you will discover the history effects common slang words and prices of methamphetamine you will find out how meth affects our children and our loved ones narcotics is the worst of all crimes except murder and perhaps even more offensive to society than murder itself in the case of murder you take away the life of a fellow human being in the case of distributing narcotics you take the mind of the individual and make his life intolerable for the good of his own soul president franklin roosevelt 1940 read my book and find out the facts about methamphetamine and what you can do to protect yourself and the ones you love meth cooks practice late industrial alchemy transforming base materials like lithium batteries and camping fuel into gold meth alchemists all over the united states tap the occulted potencies of industrial chemical and big pharma products to try to cure the ills of precarious living underemployment

insecurity and the feeling of idleness meth fires up your attention and makes repetitive tasks pleasurable whether it's factory work or tinkering at home users are awake for days and feel exuberant and invincible in one person's words they get more life the alchemy of meth is a nonfiction storybook about St. Jude County, Missouri, a place in decomposition where the toxic inheritance of deindustrialization meets the violent hope of this drug-making cottage industry. Jason Pine bases the book on fieldwork among meth cooks, recovery professionals, pastors, public defenders, narcotics agents, and pharmaceutical executives. Here, St. Jude is not reduced to its meth problem, but Pine looks at meth through materials, landscapes, and institutions, the sprawling context that makes meth labs possible. The alchemy of meth connects DIY meth labs to big pharma's superlabs, illicit speed to the legalized speed sold as ADHD medication, uniquely implicating the author's own story in the narrative. By the end of the book, the backdrop of St. Jude becomes the foreground; it could be a story about life and work anywhere in the United States where it seems no one is truly clean and all are complicit in the exploitation of their precious resources in exchange for a livable present or even the hope of a future whizz, goey, pink champagne base. The recreational and pharmacological use of speed, from amphetamine sulphate to crystal meth, is a cultural habit which has existed since the early 1900s. Although considered a cheap and somewhat filthy habit, amphetamines have tempted an array of celebrities, including Elvis Presley, Truman Capote, The Beatles, Jack Kerouac, Johnny Cash, JFK, and Adolf Hitler. All were at some point to be blunt speed freaks. *Speed* traces the cultural and criminal use of amphetamine and its unholy growth.
