Taxonomy of Australian Mammals

2015-06-16

taxonomy of australian mammals utilises the latest morphometric and genetic research to develop the most up to date and comprehensive revision of the taxonomy of australian mammals undertaken to date it proposes significant changes to the higher ranks of a number of groups and recognises several genera and species that have only very recently been identified as distinct this easy to use reference also includes a complete listing of all species subspecies and synonyms for all of australia s mammals both native and introduced as well as terrestrial and marine this book lays a foundation for future taxonomic work and identifies areas where taxonomic studies should be targeted not only at the species and subspecies level but also broader phylogenetic relationships this work will be an essential reference for students scientists wildlife managers and those interested in the science of taxonomy

sports a bill that can detect electricity in evaluating how humans have considered these special mammals he makes clear that calling these animals weird or primitive or incorrectly implying that australia is an evolutionary backwater has only added to the challenges for their conservation one outcome of these descriptions is that australia now has the worst mammal extinction rate of anywhere on earth ashby argues that many of the ways that the world thinks about australia s mammals can be traced back to the country s colonial history

Dictionary of Australian and New Guinean Mammals

2007-10-04

Catalogue of Australian Mammals, with Introductory Notes on General Mammalogy

2015-09-08

excerpt from catalogue of australian mammals with introductory notes on general mammalogy mr j douglas ogilby having been engaged by the trustees of the australian museum to prepare a catalogue of the australian mammals the work now issued is the result it contains careful descriptions of all known mammals indigenous to australia with notes also on allied fossil forms compiled from various sources of which the author gives due acknowledgment in his introduction nearly all the species are represented by one or more specimens in the museum and those which are not so are indicated by an asterisk placed against their names in the index mr ogilby has found it necessary to alter many of the generally recognised names for reasons which he gives in each case consequently some of the specimens exhibited in the museum may not bear the same designation as in the catalogue these differences will however about the publisher forgotten books publishes

settlement and every introduced species that is now feral includes a glossary and an index draws from the Australian Museum's national photographic index of Australian wildlife over 150 authors experts in their fields have contributed to the text the editor is a former executive officer of the Australian Museum and director of Sydney's Taronga Zoo

A Dictionary of Australian Mammal Names

1981

The Action Plan for Australian Mammals 2012 is the first review to assess the conservation status of all Australian mammals it complements the Action Plan for Australian Birds 2010 Garnett et al 2011 CSIRO Publishing and although the number of Australian mammal taxa is marginally fewer than for birds the proportion of endemic extinct and threatened mammal taxa is far greater these authoritative reviews represent an important foundation for understanding the current status fate and future of the nature of Australia this book considers all species and subspecies of Australian mammals

2023-03-28

olivier blanchard 5th
edition

those of external territories and territorial seas for all the mammal taxa about 300 species and subspecies considered extinct threatened near threatened or data deficient the size and trend of their population is presented along with information on geographic range and trend and relevant biological and ecological data the book also presents the current conservation status of each taxon under australian legislation what additional information is needed for managers and the required management actions recovery plans where they exist are evaluated the voluntary participation of more than 200 mammal experts has ensured that the conservation status and information are as accurate as possible and allowed considerable unpublished data to be included all accounts include maps based on the latest data from australian state and territory agencies from published scientific literature and other sources the action plan concludes that 29 australian mammal species have become extinct and 63 species are threatened and require urgent conservation action however it also shows that where guided by sound knowledge management capability and resourcing and longer term commitment there have been some notable conservation success stories and the conservation status of some species has greatly improved over the past few decades

action plan for australian mammals 2012 makes a major contribution to the conservation of a wonderful legacy that is a significant part of australia s heritage for such a legacy to endure our society must be more aware of and empathetic with our distinctively australian environment and particularly its marvellous mammal fauna relevant information must be readily accessible environmental policy and law must be based on sound evidence those with responsibility for environmental management must be aware of what priority actions they should take the urgency for action and consequences of inaction must be clear and the opportunity for hope and success must be recognised it is in this spirit that this account is offered

Catalogue of Australian Mammals
