to present social impacts such as humanitarian issues ethics adaptation urban issues local action and socio economic issues finally it addresses the political impacts such as justice issues and politics of climate change in different locations by offering this holistic review of the latest impacts of climate change the book helps researchers to better understand what needs to be done in order to move toward renewable energy change societal habits and move toward sustainable development offers comprehensive coverage of the impacts of climate change from multiple perspectives physical social and political to develop synergy across disciplines presents the latest research and developments on the understanding of climate change impacts on a variety of scales and disciplines includes case studies and extensive references for further exploration the second of three books in ifpri s climate change in africa series east african agriculture and climate change a comprehensive analysis examines the food security threats facing 10 of the countries that make up east and central africa burundi democratic republic of congo eritrea kenya madagascar rwanda sudan tanzania and uganda and explores how climate change will increase the efforts needed to achieve sustainable food security throughout the region east africa s populations is expected to grow at least through mid century the region will also see income growth both will put increased pressure on the natural resources needed to produce food and climate change makes the challenges greater east africa is already experiencing rising temperatures shifting precipitation patterns and increasing extreme events without attention to adaptation the poor will suffer the working group ii contribution to the sixth assessment report of the intergovernmental panel on climate change ipcc provides a comprehensive assessment of the scientific literature relevant to climate change impacts adaptation and vulnerability the report recognizes the interactions of climate ecosystems and biodiversity and human societies and integrates across the natural ecological social and economic sciences it emphasizes how efforts in adaptation and in reducing greenhouse gas emissions can come together in a process called climate resilient development which enables a liveable future for biodiversity and humankind the ipcc is the leading body for assessing climate change science ipcc reports are produced in comprehensive objective and transparent ways ensuring they reflect the full range of views in the scientific literature novel elements include focused topical assessments and an atlas presenting observed climate change impacts and future risks from global to regional scales available as open access on cambridge core the book works well as a reference for how one can examine potential climate change impacts in a subnational area a clear strength of the work lies in the unifying framework that the climate population and to a somewhat lesser degree urbanization scenarios provide collectively these appear to bracket a wide range of possible drives that will shape climate change impacts the overall analysis takes a refreshing approach in that it does not try to fit all these elements and the subsystem impact assessments into one grand integrated model but rather develops the assessments from a common base while allowing each to follow its own logic and scale it provides a welcome overview of how one can conduct a multisystem multisector climate impact assessment that combines natural engineering and social sciences in a rigorous format kris wernstedt journal of regional science climate scientists have determined that recent global temperature increases are due in large part to increased greenhouse gas emissions from human activities even if mitigation of these gases begins immediately there is every reason to believe that climate change will continue to occur every region in the world ought to forecast as the contributors do in this study of california a region of broad variation and high population how it will be affected by climate change and how it might best adapt models are used to estimate potential physical and biological impacts efficient adaptations and residual damages from climate change the contributors cover a broad array of climate change impacts on affected market sectors including water supply agriculture coastal resources timber and energy demand as well as ecosystems and biodiversity an integrated hydrologic agriculture model is developed to explore how the region would adapt to changes in water flows interactions between climate impacts and population and economic growth urbanization and technological change are also explored for example the study examines how both climate change and projected land development affect the region s terrestrial ecosystems and biodiversity the level of geographical detail along with the broad applicability of the modeling methodology and conclusions make this a unique and valuable reference for environmental economists scientists planners and policymakers contains large number of solved examples and practice questions answers hints and solutions have been provided to boost up the morale and increase the confidence level self assessment sheets have been given at the end of each chapter to help the students
