comparison exercises and identification guizzes the way electronic instruments are built is changing in a deeply fundamental way it is making an evolutionary leap to a new method of design that is being called synthetic instruments this new method promises to be the most significant advance in electronic test and instrumentation since the introduction of automated test equipment ate the switch to synthetic instruments is beginning now and it will profoundly affect all test and measurement equipment that will be developed in the future synthetic instruments are like ordinary instruments in that they are specific to a particular measurement or test they might be a voltmeter that measures voltage or a spectrum analyzer that measures spectra the key defining difference is this synthetic instruments are implemented purely in software that runs on general purpose non specific measurement hardware with a high speed a d and d a at its core in a synthetic instrument the software is specific the hardware is generic therefore the personality of a synthetic instrument can be changed in an instant a voltmeter may be a spectrum analyzer a few seconds later and then become a power meter or network analyzer or oscilloscope totally different instruments are implemented on the same hardware and can be switched back and forth in the blink of an eye this book explains the basics of synthetic instrumentation for the many people that will need to quickly learn about this revolutionary way to design test equipment this book attempts to demystify the topic cutting through commercial hype and obscure vague jargon to get to the heart of the technique it reveals the important basic underlying concepts showing people how the synthetic instrument design approach properly executed is so effective in creating instrumentation that out performs traditional approaches to tim and ate being used today provides an overview and complete introduction to this revolutionary new technology enables equipment designers and manufacturers to produce vastly more functional and flexible instrumentation it s not your father s multimeter a time tested systematic approach to the buying and selling of complex research instruments searching for the best laboratory instruments and systems can be a daunting and expensive task a poorly selected instrument can dramatically affect results produced and indirectly affect research papers the quality of student training and an investigator's chances for advancement buying and selling laboratory instruments offers the valuable insights of an analytical chemist and consultant with over four decades of experience in locating instruments based upon both need and price it helps all decision makers find the best equipment service and support while avoiding the brand loyalty bias of sales representatives so you can fully meet your laboratory s requirements the first section of the book guides buyers through the hurdles of funding purchasing and acquiring best fit instruments at the least expensive price it explains how to find vendors that support their customers with both knowledgeable service and application support also offered is guidance on adapting your existing instruments to new applications integrating new equipment and what to do with instruments that can no longer serve in research mode the second section explains the sales process in detail this is provided both as a warning against manipulative sales reps and as a guide to making the sale a win win process for you and your vendor it also shows you how to select a knowledgeable technical guru to help determine the exact system configuration you need and where to find the best price for it added bonuses are summary figures of buying sequence and sales tools and an appendix containing frequently asked questions and memory aids buying and selling laboratory instruments is for people directly involved in selecting and buying instruments for operational laboratories from the principle investigator to the person actually delegated with investigating and selecting the system to be acquired sales representatives laboratory managers universities pharmaceutical biotech and forensic research firms corporate laboratories graduate and postdoctoral students and principle investigators will not want to be without this indispensible
