the organizations of any type and size conducting their activities are faced to uncertainties due mainly to the factors and influences that reside in the external as well as in the internal context the uncertainties therefore are sources of risks which have an effect on the achievement of the objectives and the impact could be significant to the business the organizations to deal with this situation try in any case to manage the risks by implementing approaches more or less known sometimes in effective manner and sometimes not and often they rely on the technological solutions to address risks in systematic effective and efficient manner the international organization for standardization iso has issued a set of standards for the risk among them the main standard for the risk management is the iso 31000 the iso 31000 risk management principles and guidelines is applicable to all types of organizations and to any size and type of goods the iso 31000 as a guideline provides a framework for risk management giving quick instructions without examining in detail the concepts and without providing operational support for the effective implementation of

methodology proposed with a wide and significant lived experience in this field the author proposes to managers security managers and all those who want or are forced to make decisions in the presence of uncertainty a practical method for risk management also through practical case study the author does not limit to generic interpretations but develops approaches in detail through matrices and calculations of real risks and refers to case studies bringing examples in order to guide those involved in managing any form of risk in a systematic transparent and credible and in any scope and context the book provides an introduction to risk management to risk governance and to the risk management process provides an introduction on the concept of risk risk factors the level of risk and correlation between the elements involved in risk analysis it illustrates also the importance of risk management in decision making the awareness to the risk management and the benefits that may be obtained from risk management the author has paid special attention to the process of developing risk management flow and detailing all activities establishing the context and the scope risk assessment identification analysis and risk assessment treatment plan with countermeasures to implement in order to reduce the risks calculation of the residual risks acceptance of the residual risks proposed implementation of the countermeasures and monitoring and review the risk management process here developed is supported by a practical case study example useful to learn and to apply the methodology in all the contexts of the life of the organizations but also in the activities of life
