Management Planning for Nature Conservation

2012-12-05

the first edition of mike alexander s management planning for nature conservation brought a new dimension to the modern literature on conservation management this second edition a significant enhancement of the original deals with the development both conceptual and practical of adaptive management planning for nature conservation it is about preparing management plans and guides the reader through the entire process case studies including a conservation and access plan demonstrate the planning process in action this approach to planning can be applied to any place which is managed entirely or in part for wildlife it can be applied to the management of species or habitats in any circumstance regardless of site designation the process is fully compatible with the convention on biological diversity s ecosystem approach to conservation management mike alexander has long been at the forefront of developing management planning for conservation with experience ranging from uganda to estonia and from costa rica to wales he is the general secretary of the conservation management system consortium a group of organisations with a common aim of raising standards and developing best practice in conservation management and planning in 2012 mike alexander was elected a fellow of the society of biology in recognition of his contribution to nature conservation and in particular management planning this book has drawn on the experiences and expertise of the cms consortium and other leaders in both conservation research and wildlife management from around the world it is essential reading for professional conservation managers and any student studying management planning for conservation within a range of degree and postgraduate courses

Natural Resource Conservation 2010

this comprehensive book describes the ecological principles policies and practices required to create a sustainable future it emphasizes practical cost effective sustainable solutions to these problems that make sense from social economic and environmental perspectives a focus on sustainable development puts readers in touch with one of the most significant shifts in thinking and action in the environmental and resource management arenas a variety of lasting solutions are provided that make sense from social economic and environmental viewpoints natural resource conservation and management past present and future economics ethics and critical thinking tools for creating a sustainable future lessons from ecology the human population challenge world hunger solving the problem sustainably the nature of soils soil conservation and sustainable agriculture integrated pest management aquatic environments managing water resources sustainability water pollution fisheries conservation rangeland management forest management plant and animal extinction wildlife management sustainable waste management air pollution global warming and climate change acid deposition and stratospheric ozone depletion minerals mining and a sustainable society nonrenewable energy resources issues and options creating a sustainable system of energy intended for those interested in gaining a basic knowledge of natural resources and conservation

Tropical Biology and Conservation Management - Volume VIII 2009-05-11

this encyclopedia of tropical biology and conservation management is a component of the global encyclopedia of life support systems eolss which is an integrated compendium of twenty one encyclopedias tropical environments cover the most part of still preserved natural areas of the earth the greatest biodiversity as in terms of animals and plants as microorganisms is placed in these hot and rainy ecosystems spread up and below the equator line additionally the most part of food products with vegetal or animal origin that sustain nowadays human beings is direct or undirected dependent of tropical productivity biodiversity should be looked at and evaluated not only in terms of numbers of species but also in terms of the diversity of interactions among distinct organisms that it maintains in this sense the complexity of web structure in tropical systems is a promise of future to nature preservation on earth in the chemicals of tropical plant and animals could be the cure to infinite number of diseases new food sources and who knows what more despite these facts tropical areas have been exploited in an irresponsible way for more than 500 years due the lack of an ecological conscience of men exactly in the same way we did with temperate areas and also tropical areas in the north of equator line nowadays is estimated that due human exploitation nation conflicts and social problems less than 8 of tropical nature inside continental areas is still now untouchable the extension of damage in the tropical areas of oceans is unknown thus so all knowledge we could accumulate about tropical systems will help us as in the preservations of these important and threatened ecosystems as in a future recuperation when it was possible only knowing the past and developing culture mainly that directed to peace to a better relationship among nations and responsible use and preservation of natural resources human beings will have a long future on earth these volumes tropical biology and natural resources was divided in sessions to provide the reader the better comprehension possible of issue and also to enable future complementation and improvements in the encyclopedia like we work with life we intended to transform this encyclopedia also in a life volume in what new information could be added in any time as president of the encyclopedia and main editor i opened the theme with an article titled tropical biology and natural resources historical pathways and perspectives providing the reader an initial view of the origins of human knowledge about the tropical life and what we hope to the future in the sequence we have more than 100 chapters distributed in ten sessions tropical ecology te tropical botany tb tropical zoology tz savannah ecosystems se desert ecosystems de tropical agriculture ta natural history of tropical plants nh human impact on tropical ecosystems hi tropical phytopathology and entomology tpe case studies cs this 11 volume set contains several chapters each of size 5000 30000 words with perspectives applications and extensive illustrations it is the only publication of its kind carrying state of the art knowledge in the fields of tropical biology and conservation management and is aimed by virtue of the several applications at the following five major target audiences university and college students educators professional practitioners research personnel and policy analysts managers and decision makers and ngos

Connectivity Conservation Management 2010

first published in 2010 routledge is an imprint of taylor francis an informa company

River Conservation and Management 2012-02-10

this book is intended for those with an academic scientific and practical interest in river conservation and management it provides an overview of how changes in legislation policies institutional responsibilities science technology practical techniques and public perception have influenced how rivers have been managed over the past 20 years and the challenges that lie ahead during the next 20 years the book is based on the international conference river conservation and management 20 years on held at york thirty one chapters with contributions from north and south america europe asia and australasia provide a wide ranging perspective on this complex but profoundly important subject following an introduction that chronicles the most important contextual changes the book is organized into four broad topics catchment management ecosystem integrity and the threats to river ecosystems this covers progress on understanding and addressing the pressures affecting rivers many of which will be amplified by climate change and increasing human demands for water methods and approaches illustrating some recent techniques that have been developed to assess condition and conservation status across different types of river recovery and rehabilitation providing an insight into the principles practice public involvement and institutional networks that support and make improvements to modified river reaches integrating nature conservation into wider river management demonstrating the importance of integrated planning involvement of local communities and the use of adaptive management in achieving multiple environmental and economic benefits along rivers used for different purposes the final chapter discusses the challenges faced in dealing with an uncertain future more than 1200 different references and numerous web site citations provide the reader with an invaluable source of knowledge on the subject area

Temperate Woodland Conservation and Management 2010

this book summarizes the main discoveries management insights and policy initiatives in the science management and policy arenas associated with temperate woodlands in australia more than 60 of australia s leading researchers policy makers and natural resource managers have contributed to the volume it features new perspectives on the integration of woodland management and agricultural production including the latest thinking about whole of paddock restoration and carbon farming as well as financial and social incentive schemes to promote woodland conservation and management temperate woodland conservation and management will be a key supporting aid for farmers natural resource managers policy makers and people involved in ngo landscape restoration and management key features high quality chapters from the nation s leading researchers managers and policy makers in temperate woodlands new perspectives on the integration of woodland management and agricultural production easy to follow format that distills key new insights and lessons for future conservation and management initiatives

Decision-Making in Conservation and Natural Resource Management 2017-07-06

a guide to making good decisions about wildlife management and biodiversity conservation against a backdrop of socio environmental change

Conservation Management of Freshwater Habitats 2012-11-22

in this book the authors have applied research knowledge to the solution of practical problems facing wildlife conservation in freshwater habitats subjects covered include evaluation of the conservation interest of sites practical protection and management of freshwater habitats species conservation

Tropical Biology and Conservation Management - Volume IV 2009-05-11

this encyclopedia of tropical biology and conservation management is a component of the global encyclopedia of life support systems eolss which is an integrated compendium of twenty one encyclopedias tropical environments cover the most part of still preserved natural areas of the earth the greatest biodiversity as in terms of animals and plants as microorganisms is placed in these hot and rainy ecosystems spread up and below the equator line additionally the most part of food products with vegetal or animal origin that sustain nowadays human beings is direct or undirected dependent of tropical productivity biodiversity should be looked at and evaluated not only in terms of numbers of species but also in terms of the diversity of interactions among distinct organisms that it maintains in this sense the complexity of web structure in tropical systems is a promise of future to nature preservation on earth in the chemicals of tropical plant and animals could be the cure to infinite number of diseases new food sources and who knows what more despite these facts tropical areas have been exploited in an irresponsible way for more than 500 years due the lack of an ecological conscience of men exactly in the same way we did with temperate areas and also tropical areas in the north of equator line nowadays is estimated that due human exploitation nation conflicts and social problems less than 8 of tropical nature inside continental areas is still now untouchable the extension of damage in the tropical areas of oceans is unknown thus so all knowledge we could accumulate about tropical systems will help us as in the preservations of these important and threatened ecosystems as in a future recuperation when it was possible only knowing the past and developing culture mainly that directed to peace to a better relationship among nations and responsible use and preservation of natural resources human beings will have a long future on earth these volumes tropical biology and natural resources was divided in sessions to provide the reader the better comprehension possible of issue and also to enable future complementation and improvements in the encyclopedia like we work with life we intended to transform this encyclopedia also in a life volume in what new information could be added in any time as president of the encyclopedia and main editor i opened the theme with an

article titled tropical biology and natural resources historical pathways and perspectives providing the reader an initial view of the origins of human knowledge about the tropical life and what we hope to the future in the sequence we have more than 100 chapters distributed in ten sessions tropical ecology te tropical botany tb tropical zoology tz savannah ecosystems se desert ecosystems de tropical agriculture ta natural history of tropical plants nh human impact on tropical ecosystems hi tropical phytopathology and entomology tpe case studies cs this 11 volume set contains several chapters each of size 5000 30000 words with perspectives applications and extensive illustrations it is the only publication of its kind carrying state of the art knowledge in the fields of tropical biology and conservation management and is aimed by virtue of the several applications at the following five major target audiences university and college students educators professional practitioners research personnel and policy analysts managers and decision makers and ngos

Community-Based Biodiversity Conservation Management 2010-09-17

master s thesis from the year 2007 in the subject forestry forestry economics grade 1 7 university of göttingen institut für forstpolitik und naturschutz language english abstract community based conservation cbc refers to wildlife conservation efforts that involve rural people as an integral part of a wildlife conservation policy in africa and specifically in cameroon there have been changes in state policies towards natural resources management particularly forest resources this study deals basically on cameroon with national forest cover of over 42 which constitutes one of its major economic resources since 1995 a new forest policy act was enacted proclaimed in 1994 to accommodate two approaches that is community forestry and sustainable forest management conserving and enhancing biodiversity through rural peoples involvement was one of the components of the new forest policy act of 1995 the study analyses the conditions under which the cbc policies can be successfully implemented in cameroon with the case of the korup national park knp and its support zone and the former korup project kp it also investigates the interest and the relationship of the different stakeholders concerned especially the local community the thesis uses three hypotheses which are limited to cbc semi structured questionnaires and secondary data to test or investigate successful policy implementation in the knp by analysing i the role the local communities ii the international environmental ngos and groups played in the former korup project 1988 2003 and iii the level of biodiversity conservation and rural development in the korup project area kpa the study was carried out in the southern sector of the knp with a simple random sampling of 78 respondents out of 11 villages of the 32 villages in and around the national park the results indicate i low participation of the local communities in the integrated conservation and development

Wildlife Ecology and Conservation Management 2020-11-19

this book covers the wildlife ecology and conservation modules as part of level 3 animal management qualifications it explains all of the key concepts in ecology and conservation you will be expected to learn as part of your courses as well as how to carry out practical

work in the field this makes it an ideal book to refer to in helping you through your studies or for other readers who wish to gain a solid foundation in the subject the book is split into two parts with each part divided into smaller sections keywords throughout the text are highlighted in bold and are then explained in the glossary section at the back of the book at the end of each section there are a series of review questions to test your understanding answers to these questions can be found at the back of the book broken down by section suitable for btec and city guilds students the concepts of ecology and conservation are explained clearly glossary to aid with understanding key words review questions at the end of each section with answers at the back of the book full colour illustrations

CMS, Conservation Management Strategy: Maps 2019

for a long time resource conservationists have viewed environmental conservation as synonymous with wilderness and wildlife resources only oblivious to the contributions made by cultural and heritage resources however cultural heritage resources in many parts of the developing world are gradually becoming key in social e g communities identities and museums economic heritage tourism and eco tourism educational curriculum development civic intergenerational awareness and international resources management e g unesco in universities african cultural heritage resources are facing a challenge of being brought into various academic discourses and syllabi in a rather reactive and or haphazard approach resulting in failure to fully address and research these resources conservation needs to ensure that their use in multiple platforms and by various stakeholders is sustainable this book seeks to place african cultural heritage studies and conservation practices within an international and modern world discourse of conservation by presenting its varied themes and topics that are important for the development of the wider field of cultural heritage studies and management

African Cultural Heritage Conservation and Management 2016-07-11

a definitive textbook for students of wildlife management wildlife management and conservation presents a clear overview of the management and conservation of animals their habitats and how people influence both the relationship among these three components of wildlife management is explained in chapters written by leading experts and is designed to prepare wildlife students for careers in which they will be charged with maintaining healthy animal populations finding ways to restore depleted populations while reducing overabundant introduced or pest species and managing relationships among various human stakeholders topics covered in this book include the definitions of wildlife and management human dimensions of wildlife management animal behavior predator prey relationships structured decision making issues of scale in wildlife management wildlife health historical context of wildlife management and conservation hunting and trapping nongame species nutrition ecology water management climate change conservation planning

Wildlife Management and Conservation 2013-11-01

grazing animals enjoy an ambiguous reputation in the field of nature conservation livestock are often treated as a scourge yet native large herbivores form the prime attraction of many a reserve this book gives the first comprehensive overview of the use of grazing as a tool in conservation management considering in turn the ecological and historical background the impact of grazing on community structure management applications and future prospects this book examines issues such as the role of herbivores as keystone species the assessment of habitat quality and the function of scientific models in advancing grazing management large herbivores are shown to be potentially powerful allies in the management of nature reserves particularly in the maintenance enhancement or restoration of biodiversity grazing and conservation management will appeal to conservation biologists and rangeland managers providing them with a clearer understanding of grazing and conservation management

Measuring Conservation Management Projects 1999

principles of soil management and conservation comprehensively reviews the state of knowledge on soil erosion and management it discusses in detail soil conservation topics in relation to soil productivity environment quality and agronomic production it addresses the implications of soil erosion with emphasis on global hotspots and synthesizes available from developed and developing countries it also critically reviews information on no till management organic farming crop residue management for industrial uses conservation buffers e g grass buffers agroforestry systems and the problem of hypoxia in the gulf of mexico and in other regions this book uniquely addresses the global issues including carbon sequestration net emissions of co₂ and erosion as a sink or source of c under different scenarios of soil management it also deliberates the implications of the projected global warming on soil erosion and vice versa the concern about global food security in relation to soil erosion and strategies for confronting the remaining problems in soil management and conservation are specifically addressed this volume is suitable for both undergraduate and graduate students interested in understanding the principles of soil conservation and management the book is also useful for practitioners extension agents soil conservationists and policymakers as an important reference material

Management and the Conservation of Biodiversity 2010

this book series looks at each of the main coastal habitats salt marshes sand dunes and sand shingle shores modified coastal grazing marshes salinas and sea cliffs in turn each habitat is described in relation to its natural development and the way this has been influenced by human actions the different states in which the habitats exist are reviewed against the pressures exerted upon them options for management are considered and the likely consequences of taking a particular course of action are highlighted

Grazing and Conservation Management 2012-12-06

as it becomes ever more expensive to purchase land for conservation purposes it is becoming increasingly important both to manage existing sites properly and to create new habitats this comprehensive volume provides a pragmatic habitat by habitat guide to conservation management in which the prescriptions and methods are based on sound science coupled with practical experience for each habitat the book guides the reader through the options and solutions highlights potential problems and gives good and bad examples of habitat management in the past this will be required reading for all practicing ecologists land managers wardens landscape architects and conservationists and will provide a valuable reference for students of ecology conservation and environmental science

***Principles of Soil Conservation and Management* 2010-02-04**

today s natural resource managers must be able to navigate among the complicated interactions and conflicting interests of diverse stakeholders and decisionmakers technical and scientific knowledge though necessary are not sufficient science is merely one component in a multifaceted world of decision making and while the demands of resource management have changed greatly natural resource education and textbooks have not until now ecosystem management represents a different kind of textbook for a different kind of course it offers a new and exciting approach that engages students in active problem solving by using detailed landscape scenarios that reflect the complex issues and conflicting interests that face today s resource managers and scientists focusing on the application of the sciences of ecology and conservation biology to real world concerns it emphasizes the intricate ecological socioeconomic and institutional matrix in which natural resource management functions and illustrates how to be more effective in that challenging arena each chapter is rich with exercises to help facilitate problem based learning the main text is supplemented by boxes and figures that provide examples perspectives definitions summaries and learning tools along with a variety of essays written by practitioners with on the ground experience in applying the principles of ecosystem management accompanying the textbook is an instructor s manual that provides a detailed overview of the book and specific guidance on designing a course around it ecosystem management grew out of a training course developed and presented by the authors for the u s fish and wildlife service at its national training center in shepherdstown west virginia in 20 offerings to more than 600 natural resource professionals the authors learned a great deal about what is needed to function successfully as a professional resource manager the book offers important insights and a unique perspective dervied from that invaluable experience

Saltmarsh Conservation, Management and Restoration 2007-10-14

this practical handbook describes the principles and techniques of managing and creating habitats worldwide including grasslands forests scrub freshwater wetlands coastal habitats

arable land urban areas and gardens essential reading for conservation biologists and an invaluable resource for all those involved in conservation land management

Managing Habitats for Conservation 1995-05-26

this encyclopedia of tropical biology and conservation management is a component of the global encyclopedia of life support systems eolss which is an integrated compendium of twenty one encyclopedias tropical environments cover the most part of still preserved natural areas of the earth the greatest biodiversity as in terms of animals and plants as microorganisms is placed in these hot and rainy ecosystems spread up and below the equator line additionally the most part of food products with vegetal or animal origin that sustain nowadays human beings is direct or undirected dependent of tropical productivity biodiversity should be looked at and evaluated not only in terms of numbers of species but also in terms of the diversity of interactions among distinct organisms that it maintains in this sense the complexity of web structure in tropical systems is a promise of future to nature preservation on earth in the chemicals of tropical plant and animals could be the cure to infinite number of diseases new food sources and who knows what more despite these facts tropical areas have been exploited in an irresponsible way for more than 500 years due the lack of an ecological conscience of men exactly in the same way we did with temperate areas and also tropical areas in the north of equator line nowadays is estimated that due human exploitation nation conflicts and social problems less than 8 of tropical nature inside continental areas is still now untouchable the extension of damage in the tropical areas of oceans is unknown thus so all knowledge we could accumulate about tropical systems will help us as in the preservations of these important and threatened ecosystems as in a future recuperation when it was possible only knowing the past and developing culture mainly that directed to peace to a better relationship among nations and responsible use and preservation of natural resources human beings will have a long future on earth these volumes tropical biology and natural resources was divided in sessions to provide the reader the better comprehension possible of issue and also to enable future complementation and improvements in the encyclopedia like we work with life we intended to transform this encyclopedia also in a life volume in what new information could be added in any time as president of the encyclopedia and main editor i opened the theme with an article titled tropical biology and natural resources historical pathways and perspectives providing the reader an initial view of the origins of human knowledge about the tropical life and what we hope to the future in the sequence we have more than 100 chapters distributed in tem sessions tropical ecology te tropical botany tb tropical zoology tz savannah ecosystems se desert ecosystems de tropical agriculture ta natural history of tropical plants nh human impact on tropical ecosystems hi tropical phytopathology and entomology tpe case studies cs this 11 volume set contains several chapters each of size 5000 30000 words with perspectives applications and extensive illustrations it is the only publication of its kind carrying state of the art knowledge in the fields of tropical biology and conservation management and is aimed by virtue of the several applications at the following five major target audiences university and college students educators professional practitioners research personnel and policy analysts managers and decision makers and ngos

Ecosystem Management 2013-04-01

this book offers an international overview of how to apply the conservation management plan cmp to the 20th century architectural heritage although the cmp is universally considered a fundamental tool for sustainable management of the built heritage the application to 20th century buildings is still limited the book illustrates selected case studies from different countries to discuss how best to preserve the authenticity of the original materials manage changes in use engage users and stakeholders in this process and make conservation and sustainability work together conserving 20th century architecture will provide insights for scholars and students and assist architects in drafting an effective conservation management plan

Habitat Management for Conservation 2007-11

this book deals with the development of temperate coastal sand dunes and the way these have been influenced by human activity the different states in which the habitat exists both for the beach foredune and inland dune are reviewed against the pressures exerted upon them options for management are considered and the likely consequences of taking a particular course of action highlighted these options include traditional approaches to the conservation and management of wildlife and landscapes as well as habitat restoration the way the value of the areas changes under different management regimes is considered mainly from an environmental perspective consideration is given to new approaches to management and restoration including adopting a more dynamic approach audience this book will be of interest to academics students and professionals concerned with policy formulation and or actively managing coastal areas

Cats of the World 1986

we might think sustainable management is a new idea created in the 1960s by enlightened modern scientists we might think that it puts us on a new path beyond what management was originally about but this is not true sustainable management is as old as civilization and was a foundation stone of management science as it was formed in the first decade of the 20th century recovering this forgotten past provides deeper roots and greater traction to advance sustainable management in our own times this book charts a history of sustainable management from premodern times through the birth of management science as an offshoot of the conservation movement to the present day the authors argue that modern tools like triple bottom line reporting and multiple sustainable development goals may be less useful than a return to a more fundamental and holistic view of management

Conservation Management Strategy, Waikato 2014-2024 2014

study of the interaction between man and the environment for undergraduate students in biology

Tropical Biology and Conservation Management - Volume I 2009-05-11

australia is the custodian of a diverse range of continental and oceanic islands from heard and macquarie in the sub antarctic to temperate lord howe and norfolk to the tropical cocos keeling islands and the islands of the great barrier reef australia s islands contain some of the nation s most iconic fauna flora and ecosystems they are a refuge for over 35 of australia s threatened species and for many others declining on mainland australia they also have significant cultural value especially for indigenous communities and economic value as centres for tourism australian island arks presents a compelling case for restoring and managing islands to conserve our natural heritage with contributions from island practitioners researchers and policy makers it reviews current island management practices and discusses the need and options for future conservation work chapters focus on the management of invasive species threatened species recovery conservation planning indigenous cultural values and partnerships tourism enterprises visitor management and policy and legislature case studies show how island restoration and conservation approaches are working in australia and what the emerging themes are for the future australian island arks will help island communities managers visitors and decision makers to understand the current status of australia s islands their management challenges and the opportunities that exist to make best use of these iconic landscapes

Scheyville National Park Conservation Management Plan 2009

as in the terrestrial environment most data collection from freshwater habitats to date falls into the survey surveillance or research categories the critical difference between these exercises and a monitoring project is that a monitoring project will clearly identify when we need to make a management response a model for conservation management and monitoring monitoring as defined by hellawell is essentially a tool of practical conservation management and fig 1 1 shows a simple but effective model for nature conservation management and monitoring the need for clear decision making is implicit in this model first we must decide what would represent a favourable state for the key habitat or species and then we must decide when to intervene if the state is or becomes unfavourable a third often overlooked but equally important decision concerns when we would consider the habitat or species to have recovered this is unlikely to be the same point that we became concerned about it this decision not only has resource implications it can also have major implications for other habitats and species prey species are an obvious example all of these decisions are essential to the development of an efficient and effective monitoring project
