research powers innovation and technoscientific advance but it is due for a rethink one consistent with its deeply holistic nature requiring deeply human nurturing research is a deeply human endeavor that must be nurtured to achieve its full potential as with tending a garden care must be taken to organize plant feed and weed and the manner in which this nurturing is done must be consistent with the nature of what is being nurtured in the genesis of technoscientific revolutions venkatesh narayanamurti and jeffrey tsao propose a new and holistic system a rethinking of the nature and nurturing of research they share lessons from their vast research experience in the physical sciences and engineering as well as from perspectives drawn from the history and philosophy of science and technology research policy and management and the evolutionary biological complexity physical and economic sciences narayanamurti and tsao argue that research is a recursive reciprocal process at many levels between science and technology between questions and answer finding and between the consolidation and challenging of conventional wisdom these fundamental aspects of the nature of research should be reflected in how it is nurtured to that end narayanamurti and tsao propose aligning organization funding and governance with research embracing a culture of holistic technoscientific exploration and instructing people with care and accountability

testing is one of the most controversial of all state and federal educational policies the effects of testing are quite ambiguous the same test may lead to different consequences in different circumstances and teachers may use very different strategies to prepare students for tests although most experts agree that mandatory testing leads to teaching to the test they disagree about whether it leads to meaningless drill wasted time deprofessionalizing teachers and demotivating students or to more challenging and thoughtful curricula more engaging teaching increased student motivation and increased accountability to help sort through this ambiguity and provide a firmer basis for decisions the ambiguity of teaching to the test standards assessment and educational reform offers a hard look at the effects of state testing and thoroughly examines the ambiguity of test preparation and how test preparation practices are influenced by what teachers know and the leadership coming from the school and district drawing on data from a three year study of new jersey's testing policy in elementary mathematics and science it helps to explain the variety of ways that teachers modify their teaching in response to state tests raises important questions and offers useful guidance on how state policymakers and local and district school administrators can implement policies that will improve educational equity and performance for all students it also offers an in depth analysis of classroom practices that should inform teachers and teacher educators whose goal is to meaningfully implement conceptually based teaching practices this comprehensive look at the statewide variation in testing practice features a data based non ideological treatment of how testing affects teachers in a field characterized by ideologically driven beliefs and by anecdotes an extensive and well integrated combination of qualitative and quantitative data sources that provide a statewide overview as well as an in depth analysis of teachers and classrooms a careful analysis of the variety of forms of teaching to the test and a multilevel exploration of how a variety of personal and leadership factors can influence teaching to the test this is an important book for researchers professionals and students in educational testing educational policy educational administration mathematics and science education educational reform and the politics and sociology of education it will also prove useful for state policymakers school and district leaders and teacher educators and curriculum specialists who are making decisions about how to design and respond to new testing systems
