this handbook responds to the needs and aspirations of current and future generations of development economists by providing critical reference material alongside or in relation to mainstream propositions despite the potential of globalisation in accelerating growth and development in low and middle income countries through the spread of technology knowledge and information its current practice in many parts of the world has led to processes that are socially economically and politically and ecologically unsustainable it is critical for development economists to engage with the pivotal question of how to change the nature and course of globalisation to make it work for inclusive and sustainable development applying a critical and pluralistic approach the chapters in this handbook examine economics of development paths under globalisation focusing on sustainable development in social environmental institutional and political economy dimensions it aims at advancing the frontier of development economics in these key aspects and generating more refined policy perspectives it is critically reflective in examining effects of globalisation on development paths to date and in terms of methodological and analytical approaches as well as forward thinking in policy perspectives with a view to laying a foundation for sustainable development

an introduction to stochastic modeling revised edition provides information pertinent to the standard concepts and methods of stochastic modeling this book presents the rich diversity of applications of stochastic processes in the sciences organized into nine chapters this book begins with an overview of diverse types of stochastic models which predicts a set of possible outcomes weighed by their likelihoods or probabilities this text then provides exercises in the applications of simple stochastic analysis to appropriate problems other chapters consider the study of general functions of independent identically distributed nonnegative random variables representing the successive intervals between renewals this book discusses as well the numerous examples of markov branching processes that arise naturally in various scientific disciplines the final chapter deals with queueing models which aid the design process by predicting system performance this book is a valuable resource for students of engineering and management science engineers will also find this book useful

correct word identification and processing is a prerequisite for accurate reading and decades of psycholinguistic and neuroscientific research have shown that the magical moments of visual word recognition are short lived and markedly fast the time window in which a given letter string passes from being a mere sequence of printed curves and strokes to acquiring the word status takes around one third of a second in a few hundred milliseconds a skilled reader recognizes an isolated word and carries out a number of underlying processes such as the encoding of letter position and letter identity and lexico semantic information retrieval however the precise manner and order in which these processes occur or co occur is a matter of contention subject to empirical research there s no agreement regarding the precise timing of some of the essential processes that guide visual word processing such as precise letter identification letter position assignment or sub word unit processing bigrams trigrams syllables morphemes among others which is the sequence of processes that lead to lexical access how do these and other processes interact with each other during the early moments of word processing do these processes occur in a serial fashion or do they take place in parallel are these processes subject to mutual interaction principles is feedback allowed for within the earliest stages of word identification and ultimately when does the reader s brain effectively identify a given word a vast number of questions remain open and this research topic will cover some of them giving the readership the opportunity to understand how the scientific community faces the problem of modeling the early stages of word identification according to the latest neuroscientific findings the present research topic aimed to combine recent experimental evidence on early word processing from different techniques together with comprehensive reviews of the current work directions in order to create a landmark forum in which experts in the field defined the state of the art and future directions we were willing to receive submissions of empirical as well as theoretical and review articles based on different computational and neuroscience oriented methodologies we especially encouraged researchers primarily using electrophysiological or magnetoencephalographic techniques as well as eye tracking to participate given that these techniques provide us with the opportunity to uncover the mysteries of lexical access allowing for a fine grained time course analysis the main focus of interest concerned the processes that are held within the initial 250 300 milliseconds after word presentation covering areas that link basic visuo attentional systems with linguistic mechanisms

a right to equality and non discrimination is widely seen as fundamental in democratic legal systems but failure to identify the human interest that equality aims to uphold reinforces the argument of those who attack it as morally empty or unsubstantiated and weakens its status as a fundamental human right this book argues that an understanding of the human interest which equality aims to uphold is feasible within the jurisprudence of the european court of human rights ecthr and the european court of justice ecj in comparing the evolution of the prohibition of discrimination in the case law of both courts charilaos nikolaidis demonstrates that conceptual convergence within the european convention on human rights echr and the eu on the issue of equality is not as far as it might appear initially while the two bodies of equality law are extremely divergent as to the requirements they impose their interpretation by the international judiciary might be properly analysed under a common light to emphasise the substantive dimension of equality in european human rights law the book will be of great use and interest to scholars and students of human rights discrimination law and european

examining the role of implicit unconscious thinking on reasoning decision making problem solving creativity and its neurocognitive basis for a genuinely psychological conception of rationality this volume contributes to a current debate within the psychology of thought that has wide implications for our ideas about creativity decision making and economic behavior the

essays focus on the role of implicit unconscious thinking in creativity and problem solving the interaction of intuition and analytic thinking and the relationship between communicative heuristics and thought the analyses move beyond the conventional conception of mind informed by extra psychological theoretical models toward a genuinely psychological conception of rationality a rationality no longer limited to conscious explicit thought but able to exploit the intentional implicit level the contributors consider a new conception of human rationality that must cope with the uncertainty of the real world the implications of abandoning the normative model of classic logic and adopting a probabilistic approach instead the argumentative and linguistic aspects of reasoning and the role of implicit thought in reasoning creativity and its neurological base contributors maria bagassi linden j ball jean baratgin aron k barbey tilmann betsch eric billaut jean françois bonnefon pierre bonnier shira elqayam keith frankish gerd gigerenzer ken gilhooly denis hilton anna lang stefanie lindow laura macchi hugo mercier giuseppe mosconi ian r newman mike oaksford david over guy politzer johannes ritter steven a sloman edward j n stupple ron sun nicole h therriault valerie a thompson emmanuel trouche raymond riccardo viale

nearly 2 million americans develop a healthcare associated infection each year and some 100 000 of them die as a result such infections are highly preventable particularly through the adoption and implementation of evidence based methods for reducing patient infection at the point of care in cases where hospitals fall short of their goals for improving infection prevention their failures are often rooted in a low rate of staff adherence to the new prevention policies in easy to read user friendly language preventing hospital infections

leads readers through a step by step description of a quality improvement intervention as it might unfold in a model hospital pinpointing the likely obstacles and offering practical strategies for how to overcome them the text draws on the extensive personal clinical experience of the authors including examples anecdotes and down to earth practical guidance whereas most books focus on the technical aspects of healthcare associated infections this book offers the first manual for effecting real practical change whether resistance comes from physicians who distrust change nurses who want to protect their turf or infection preventionists who avoid the wards preventing hospital infections offers an innovative and accessible approach that focuses on navigating the human element in a hospital quality improvement initiative
